Abstract

Voting rules aggregate multiple individual preferences in order to make a collective decision. Commonly, these mechanisms are expected to respect a multitude of different notions of fairness and reliability, which must be carefully balanced to avoid inconsistencies.

This article contains a formalisation of a framework for the construction of such fair voting rules using composable modules [1, 2]. The framework is a formal and systematic approach for the flexible and verified construction of voting rules from individual composable modules to respect such social-choice properties by construction. Formal composition rules guarantee resulting social-choice properties from properties of the individual components which are of generic nature to be reused for various voting rules. We provide proofs for a selected set of structures and composition rules. The approach can be readily extended in order to support more voting rules, e.g., from the literature by extending the sets of modules and composition rules.

Chapter 1

Social-Choice Types

1.1 Auxiliary Lemmas

```
theory Auxiliary-Lemmas
  imports Main
begin
```

Summation function is invariant under application of a (bijective) permutation on the elements.

```
lemma sum-comp:
  fixes
     $f :: 'x \Rightarrow ('z :: \text{comm-monoid-add})$  and
     $g :: 'y \Rightarrow 'x$  and
     $X :: 'x \text{ set}$  and
     $Y :: 'y \text{ set}$ 
  assumes bij-betw  $g$   $Y$   $X$ 
  shows  $(\sum x \in X. f\ x) = (\sum x \in Y. (f \circ g)\ x)$ 
  <proof>
```

The inversion of a composition of injective functions is equivalent to the composition of the two individual inverted functions.

```
lemma the-inv-comp:
  fixes
     $X :: 'x \text{ set}$  and
     $Y :: 'y \text{ set}$  and
     $Z :: 'z \text{ set}$  and
     $f :: 'y \Rightarrow 'x$  and
     $g :: 'z \Rightarrow 'y$  and
     $x :: 'x$ 
  assumes
    bij-betw  $f$   $Y$   $X$  and
    bij-betw  $g$   $Z$   $Y$  and
     $x \in X$ 
  shows the-inv-into  $Z$   $(f \circ g)\ x = ((\text{the-inv-into } Z\ g) \circ (\text{the-inv-into } Y\ f))\ x$ 
  <proof>
```

end

1.2 Preference Relation

```
theory Preference-Relation
  imports Main
begin
```

The very core of the composable modules voting framework: types and functions, derivations, lemmas, operations on preference relations, etc.

1.2.1 Definition

Each voter expresses pairwise relations between all alternatives, thereby inducing a linear order.

```
type-synonym 'a Preference-Relation = 'a rel
```

```
type-synonym 'a Vote = 'a set × 'a Preference-Relation
```

```
fun is-less-preferred-than :: 'a ⇒ 'a Preference-Relation ⇒ 'a ⇒ bool
  (- ≤- - [50, 1000, 51] 50) where
  a ≤r b = ((a, b) ∈ r)
```

```
fun alts- $\mathcal{V}$  :: 'a Vote ⇒ 'a set where
  alts- $\mathcal{V}$  V = fst V
```

```
fun pref- $\mathcal{V}$  :: 'a Vote ⇒ 'a Preference-Relation where
  pref- $\mathcal{V}$  V = snd V
```

```
lemma lin-imp-antisym:
  fixes
    A :: 'a set and
    r :: 'a Preference-Relation
  assumes linear-order-on A r
  shows antisym r
  ⟨proof⟩
```

```
lemma lin-imp-trans:
  fixes
    A :: 'a set and
    r :: 'a Preference-Relation
  assumes linear-order-on A r
  shows trans r
```

$\langle \text{proof} \rangle$

1.2.2 Ranking

fun *rank* :: 'a *Preference-Relation* $\Rightarrow$ 'a $\Rightarrow$ nat **where**
 rank *r* *a* = card (above *r* *a*)

lemma *rank-gt-zero*:

fixes

r :: 'a *Preference-Relation* **and**

a :: 'a

assumes

refl: *a* $\preceq_r$ *a* **and**

fin: finite *r*

shows *rank* *r* *a* $\geq$ 1

$\langle \text{proof} \rangle$

1.2.3 Limited Preference

definition *limited* :: 'a set $\Rightarrow$ 'a *Preference-Relation* $\Rightarrow$ bool **where**
 limited *A* *r* $\equiv$ *r* $\subseteq$ *A* $\times$ *A*

lemma *limited-dest*:

fixes

A :: 'a set **and**

r :: 'a *Preference-Relation* **and**

a *b* :: 'a

assumes

a $\preceq_r$ *b* **and**

limited *A* *r*

shows *a* $\in$ *A* $\wedge$ *b* $\in$ *A*

$\langle \text{proof} \rangle$

fun *limit* :: 'a set $\Rightarrow$ 'a *Preference-Relation* $\Rightarrow$ 'a *Preference-Relation* **where**
 limit *A* *r* = {(*a*, *b*) $\in$ *r*. *a* $\in$ *A* $\wedge$ *b* $\in$ *A*}

definition *connex* :: 'a set $\Rightarrow$ 'a *Preference-Relation* $\Rightarrow$ bool **where**
 connex *A* *r* $\equiv$ *limited* *A* *r* $\wedge$ ($\forall$ *a* $\in$ *A*. $\forall$ *b* $\in$ *A*. *a* $\preceq_r$ *b* $\vee$ *b* $\preceq_r$ *a*)

lemma *connex-imp-refl*:

fixes

A :: 'a set **and**

r :: 'a *Preference-Relation*

assumes *connex* *A* *r*

shows *refl-on* *A* *r*

$\langle \text{proof} \rangle$

lemma *lin-ord-imp-connex*:

fixes

A :: 'a set **and**

$r :: 'a \text{ Preference-Relation}$
assumes $\text{linear-order-on } A \ r$
shows $\text{connex } A \ r$
 $\langle \text{proof} \rangle$

lemma $\text{connex-antsym-and-trans-imp-lin-ord:}$
fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
assumes
 $\text{connex-r: } \text{connex } A \ r$ **and**
 $\text{antisym-r: } \text{antisym } r$ **and**
 $\text{trans-r: } \text{trans } r$
shows $\text{linear-order-on } A \ r$
 $\langle \text{proof} \rangle$

lemma limit-to-limits:
fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
shows $\text{limited } A \ (\text{limit } A \ r)$
 $\langle \text{proof} \rangle$

lemma $\text{limit-presv-connex:}$
fixes
 $A \ B :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
assumes
 $\text{connex: } \text{connex } B \ r$ **and**
 $\text{subset: } A \subseteq B$
shows $\text{connex } A \ (\text{limit } A \ r)$
 $\langle \text{proof} \rangle$

lemma $\text{limit-presv-antisym:}$
fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
assumes $\text{antisym } r$
shows $\text{antisym } (\text{limit } A \ r)$
 $\langle \text{proof} \rangle$

lemma $\text{limit-presv-trans:}$
fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
assumes $\text{trans } r$
shows $\text{trans } (\text{limit } A \ r)$
 $\langle \text{proof} \rangle$

lemma *limit-presv-lin-ord*:
fixes
 $A\ B :: 'a\ set$ **and**
 $r :: 'a\ Preference-Relation$
assumes
 $linear-order-on\ B\ r$ **and**
 $A \subseteq B$
shows $linear-order-on\ A\ (limit\ A\ r)$
 $\langle proof \rangle$

lemma *limit-presv-prefs*:
fixes
 $A :: 'a\ set$ **and**
 $r :: 'a\ Preference-Relation$ **and**
 $a\ b :: 'a$
assumes
 $a \preceq_r b$ **and**
 $a \in A$ **and**
 $b \in A$
shows $let\ s = limit\ A\ r\ in\ a \preceq_s b$
 $\langle proof \rangle$

lemma *limit-rel-presv-prefs*:
fixes
 $A :: 'a\ set$ **and**
 $r :: 'a\ Preference-Relation$ **and**
 $a\ b :: 'a$
assumes $(a, b) \in limit\ A\ r$
shows $a \preceq_r b$
 $\langle proof \rangle$

lemma *limit-trans*:
fixes
 $A\ B :: 'a\ set$ **and**
 $r :: 'a\ Preference-Relation$
assumes $A \subseteq B$
shows $limit\ A\ r = limit\ A\ (limit\ B\ r)$
 $\langle proof \rangle$

lemma *lin-ord-not-empty*:
fixes $r :: 'a\ Preference-Relation$
assumes $r \neq \{\}$
shows $\neg linear-order-on\ \{\}\ r$
 $\langle proof \rangle$

lemma *lin-ord-singleton*:
fixes $a :: 'a$
shows $\forall\ r.\ linear-order-on\ \{a\}\ r \longrightarrow r = \{(a, a)\}$
 $\langle proof \rangle$

1.2.4 Auxiliary Lemmas

lemma *above-trans*:

fixes

$r :: 'a \text{ Preference-Relation}$ **and**
 $a \ b :: 'a$

assumes

$\text{trans } r$ **and**
 $(a, b) \in r$

shows $\text{above } r \ b \subseteq \text{above } r \ a$
<proof>

lemma *above-refl*:

fixes

$A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$ **and**
 $a :: 'a$

assumes

$\text{refl-on } A \ r$ **and**
 $a \in A$

shows $a \in \text{above } r \ a$
<proof>

lemma *above-subset-geq-one*:

fixes

$A :: 'a \text{ set}$ **and**
 $r \ r' :: 'a \text{ Preference-Relation}$ **and**
 $a :: 'a$

assumes

$\text{linear-order-on } A \ r$ **and**
 $\text{linear-order-on } A \ r'$ **and**
 $\text{above } r \ a \subseteq \text{above } r' \ a$ **and**
 $\text{above } r' \ a = \{a\}$

shows $\text{above } r \ a = \{a\}$
<proof>

lemma *above-connex*:

fixes

$A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$ **and**
 $a :: 'a$

assumes

$\text{connex } A \ r$ **and**
 $a \in A$

shows $a \in \text{above } r \ a$
<proof>

lemma *pref-imp-in-above*:

fixes

$r :: 'a \text{ Preference-Relation}$ **and**

$a \ b :: 'a$
shows $(a \preceq_r b) = (b \in \text{above } r \ a)$
 $\langle \text{proof} \rangle$

lemma *limit-presv-above:*

fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$ **and**
 $a \ b :: 'a$
assumes
 $b \in \text{above } r \ a$ **and**
 $a \in A$ **and**
 $b \in A$
shows $b \in \text{above } (\text{limit } A \ r) \ a$
 $\langle \text{proof} \rangle$

lemma *limit-rel-presv-above:*

fixes
 $A \ B :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$ **and**
 $a \ b :: 'a$
assumes $b \in \text{above } (\text{limit } B \ r) \ a$
shows $b \in \text{above } r \ a$
 $\langle \text{proof} \rangle$

lemma *above-one:*

fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$
assumes
 $\text{lin-ord-}r$: $\text{linear-order-on } A \ r$ **and**
 $\text{fin-}A$: $\text{finite } A$ **and**
 $\text{non-empty-}A$: $A \neq \{\}$
shows $\exists \ a \in A. \text{above } r \ a = \{a\} \wedge (\forall \ a' \in A. \text{above } r \ a' = \{a'\} \longrightarrow a' = a)$
 $\langle \text{proof} \rangle$

lemma *above-one-eq:*

fixes
 $A :: 'a \text{ set}$ **and**
 $r :: 'a \text{ Preference-Relation}$ **and**
 $a \ b :: 'a$
assumes
 lin-ord : $\text{linear-order-on } A \ r$ **and**
 $\text{fin-}A$: $\text{finite } A$ **and**
 $\text{not-empty-}A$: $A \neq \{\}$ **and**
 $\text{above-}a$: $\text{above } r \ a = \{a\}$ **and**

```

A norm on R to n is a mapping $N: R \mapsto n$ on R that has the following properties for all mappings u (and v) in R to n :

- positive scalability: $N(a * u) = |a| * N(u)$ for all a in R .
- positive semidefiniteness: $N(u) \geq 0$ with $N(u) = 0$ if and only if $u = (0, 0, \dots, 0)$.
- triangle inequality: $N(u + v) \leq N(u) + N(v)$.

1.4 Electoral Result

```
theory Result
  imports Main
begin
```

An electoral result is the principal result type of the composable modules voting framework, as it is a generalization of the set of winning alternatives from social choice functions. Electoral results are selections of the received (possibly empty) set of alternatives into the three disjoint groups of elected, rejected and deferred alternatives. Any of those sets, e.g., the set of winning (elected) alternatives, may also be left empty, as long as they collectively still hold all the received alternatives.

1.4.1 Auxiliary Functions

```
type-synonym 'r Result = 'r set * 'r set * 'r set
```

A partition of a set A are pairwise disjoint sets that "set equals partition" A. For this specific predicate, we have three disjoint sets in a triple.

```
fun disjoint3 :: 'r Result  $\Rightarrow$  bool where
  disjoint3 (e, r, d) =
    ((e  $\cap$  r = {})  $\wedge$ 
     (e  $\cap$  d = {})  $\wedge$ 
     (r  $\cap$  d = {}))
```

```
fun set-equals-partition :: 'r set  $\Rightarrow$  'r Result  $\Rightarrow$  bool where
  set-equals-partition X (e, r, d) = (e  $\cup$  r  $\cup$  d = X)
```

1.4.2 Definition

A result generally is related to the alternative set A (of type 'a). A result should be well-formed on the alternatives. Also it should be possible to limit a well-formed result to a subset of the alternatives.

Specific result types like social choice results (sets of alternatives) can be realized via sublocales of the result locale.

```
locale result =
  fixes
    well-formed :: 'a set  $\Rightarrow$  ('r Result)  $\Rightarrow$  bool and
    limit :: 'a set  $\Rightarrow$  'r set  $\Rightarrow$  'r set
  assumes  $\forall$  (A :: 'a set) (r :: 'r Result).
    (set-equals-partition (limit A UNIV) r  $\wedge$  disjoint3 r)  $\longrightarrow$  well-formed A r
```

These three functions return the elect, reject, or defer set of a result.

```
fun (in result) limitR :: 'a set  $\Rightarrow$  'r Result  $\Rightarrow$  'r Result where
  limitR A (e, r, d) = (limit A e, limit A r, limit A d)
```

abbreviation *elect-r* :: 'r Result $\Rightarrow$ 'r set **where**
elect-r r $\equiv$ fst r

abbreviation *reject-r* :: 'r Result $\Rightarrow$ 'r set **where**
reject-r r $\equiv$ fst (snd r)

abbreviation *defer-r* :: 'r Result $\Rightarrow$ 'r set **where**
defer-r r $\equiv$ snd (snd r)

end

1.5 Preference Profile

theory *Profile*
imports *Preference-Relation*
Auxiliary-Lemmas
HOL-Library.Extended-Nat
HOL-Combinatorics.Permutations
begin

Preference profiles denote the decisions made by the individual voters on the eligible alternatives. They are represented in the form of one preference relation (e.g., selected on a ballot) per voter, collectively captured in a mapping of voters onto their respective preference relations. If there are finitely many voters, they can be enumerated and the mapping can be interpreted as a list of preference relations. Unlike the common preference profiles in the social-choice sense, the profiles described here consider only the (sub-)set of alternatives that are received.

1.5.1 Definition

A profile contains one ballot for each voter. An election consists of a set of participating voters, a set of eligible alternatives, and a corresponding profile.

type-synonym ('a, 'v) *Profile* = 'v $\Rightarrow$ ('a *Preference-Relation*)

type-synonym ('a, 'v) *Election* = 'a set $\times$ 'v set $\times$ ('a, 'v) *Profile*

fun *alternatives- $\mathcal{E}$* :: ('a, 'v) *Election* $\Rightarrow$ 'a set **where**

 $\langle \text{proof} \rangle$

lemma *cond-winner-unique'*:
fixes
 $V :: 'v \text{ set}$ **and**
 $A :: 'a \text{ set}$ **and**

```

  p :: ('a, 'v) Profile and
  a b :: 'a
assumes
  condorcet-winner V A p a and
  b ≠ a
shows ¬ condorcet-winner V A p b
⟨proof⟩

```

1.5.7 Limited Profile

This function restricts a profile p to a set A of alternatives and a set V of voters s.t. voters outside of V do not have any preferences or do not cast a vote. This keeps all of A 's preferences.

```

fun limit-profile :: 'a set ⇒ ('a, 'v) Profile ⇒ ('a, 'v) Profile where
  limit-profile A p = (λ v. limit A (p v))

```

```

lemma limit-prof-trans:
fixes
  A B C :: 'a set and
  p :: ('a, 'v) Profile
assumes
  B ⊆ A and
  C ⊆ B
shows limit-profile C p = limit-profile C (limit-profile B p)
⟨proof⟩

```

```

lemma limit-profile-sound:
fixes
  A B :: 'a set and
  V :: 'v set and
  p :: ('a, 'v) Profile
assumes
  profile V B p and
  A ⊆ B
shows profile V A (limit-profile A p)
⟨proof⟩

```

1.5.8 Lifting Property

```

definition equiv-prof-except-a :: 'v set ⇒ 'a set ⇒ ('a, 'v) Profile ⇒
  ('a, 'v) Profile ⇒ 'a ⇒ bool where
  equiv-prof-except-a V A p p' a ≡
  profile V A p ∧ profile V A p' ∧ a ∈ A ∧
  (∀ v ∈ V. equiv-rel-except-a A (p v) (p' v) a)

```

An alternative gets lifted from one profile to another iff its ranking increases in at least one ballot, and nothing else changes.

```

definition lifted :: 'v set ⇒ 'a set ⇒ ('a, 'v) Profile ⇒

```

$(\text{'a}, \text{'v}) \text{ Profile} \Rightarrow \text{'a} \Rightarrow \text{bool}$ **where**
 $\text{lifted } V A p p' a \equiv$
 $\text{finite-profile } V A p \wedge \text{finite-profile } V A p' \wedge a \in A$
 $\wedge (\forall v \in V. \neg \text{Preference-Relation.lifted } A (p v) (p' v) a \longrightarrow (p v) = (p' v))$
 $\wedge (\exists v \in V. \text{Preference-Relation.lifted } A (p v) (p' v) a)$

lemma *lifted-imp-equiv-prof-except-a*:

fixes
 $A :: \text{'a set}$ **and**
 $V :: \text{'v set}$ **and**
 $p p' :: (\text{'a}, \text{'v}) \text{ Profile}$ **and**
 $a :: \text{'a}$
assumes *lifted* $V A p p' a$
shows *equiv-prof-except-a* $V A p p' a$
 $\langle \text{proof} \rangle$

lemma *negl-diff-imp-eq-limit-prof*:

fixes
 $A A' :: \text{'a set}$ **and**
 $V :: \text{'v set}$ **and**
 $p p' :: (\text{'a}, \text{'v}) \text{ Profile}$ **and**
 $a :: \text{'a}$
assumes
 $\text{change: equiv-prof-except-a } V A' p q a$ **and**
 $\text{subset: } A \subseteq A'$ **and**
 $\text{not-in-A: } a \notin A$
shows $\forall v \in V. (\text{limit-profile } A p) v = (\text{limit-profile } A q) v$
 — With the current definitions of *equiv-prof-except-a* and *limit-prof*, we can only conclude that the limited profiles coincide on the given voter set, since *limit-prof* may change the profiles everywhere, while *equiv-prof-except-a* only makes statements about the voter set.
 $\langle \text{proof} \rangle$

lemma *limit-prof-eq-or-lifted*:

fixes

assumes
 $\text{lifted-a: lifted } V A' p p' a$ **and**
 $\text{subset: } A \subseteq A'$
shows $(\forall v \in V. \text{limit-profile } A p v = \text{limit-profile } A p' v)$
 $\vee \text{lifted } V A (\text{limit-profile } A p) (\text{limit-profile } A p') a$
 $\langle \text{proof} \rangle$

end

1.6 Social Choice Result

```
theory Social-Choice-Result
  imports Result
begin
```

1.6.1 Definition

A social choice result contains three sets of alternatives: elected, rejected, and deferred alternatives.

```
fun well-formed-SCF :: 'a set  $\Rightarrow$  'a Result  $\Rightarrow$  bool where
  well-formed-SCF A res = (disjoint3 res  $\wedge$  set-equals-partition A res)
```

```
fun limit-SCF :: 'a set  $\Rightarrow$  'a set  $\Rightarrow$  'a set where
  limit-SCF A r = A  $\cap$  r
```

1.6.2 Auxiliary Lemmas

```
lemma result-imp-rej:
  fixes A e r d :: 'a set
  assumes well-formed-SCF A (e, r, d)
  shows A - (e  $\cup$  d) = r
   $\langle$ proof $\rangle$ 
```

```
lemma result-count:
  fixes A e r d :: 'a set
  assumes
    wf-result: well-formed-SCF A (e, r, d) and
    fin-A: finite A
  shows card A = card e + card r + card d
   $\langle$ proof $\rangle$ 
```

```
lemma defer-subset:
  fixes
    A :: 'a set and
    r :: 'a Result
  assumes well-formed-SCF A r
  shows defer-r r  $\subseteq$  A
   $\langle$ proof $\rangle$ 
```

```

  fixes
    A :: 'a set and
    r :: 'a Result
  assumes well-formed-SCF A r
```

```

    shows elect-r  $r \subseteq A$ 
  <proof>

lemma reject-subset:
  fixes
     $A :: 'a \text{ set}$  and
     $r :: 'a \text{ Result}$ 
  assumes well-formed-SCF  $A \ r$ 
  shows reject-r  $r \subseteq A$ 
  <proof>

end

```

1.7 Social Welfare Result

```

theory Social-Welfare-Result
  imports Result
          Preference-Relation
begin

```

A social welfare result contains three sets of relations: elected, rejected, and deferred. A well-formed social welfare result consists only of linear orders on the alternatives.

```

fun well-formed-SWF :: ' $a \text{ set} \Rightarrow ('a \text{ Preference-Relation}) \text{ Result} \Rightarrow \text{bool}$ ' where
  well-formed-SWF  $A \ res = (\text{disjoint3 } res \wedge$ 
                            $\text{set-equals-partition } \{r. \text{linear-order-on } A \ r\} \ res)$ 

```

```

fun limit-SWF :: ' $a \text{ set} \Rightarrow ('a \text{ Preference-Relation}) \text{ set} \Rightarrow$ 
   $('a \text{ Preference-Relation}) \text{ set}$ ' where
  limit-SWF  $A \ res = \{\text{limit } A \ r \mid r. r \in res \wedge \text{linear-order-on } A \ (\text{limit } A \ r)\}$ 

```

```

end

```

1.8 Electoral Result Types

```

theory Result-Interpretations
  imports Social-Choice-Result
          Social-Welfare-Result
          Collections.Locale-Code
begin

```

Interpretations of the result locale are placed inside a Locale-Code block in order to enable code generation of later definitions in the locale. Those definitions need to be added via a Locale-Code block as well.

$\langle ML \rangle$

Results from social choice functions (*SCFs*), for the purpose of composability and modularity given as three sets of (potentially tied) alternatives. See `Social_Choice_Result.thy` for details.

global-interpretation *SCF-result: result well-formed-SCF limit-SCF*

1.10.1 Definitions

fun *result-action* :: ('x, 'r) *binary-fun* $\Rightarrow$ ('x, 'r *Result*) *binary-fun* **where**
result-action ψ $x = (\lambda r. (\psi\ x\ 'elect-r\ r, \psi\ x\ 'reject-r\ r, \psi\ x\ 'defer-r\ r))$

Anonymity

Bijection group on the set of voters.

definition *bijection_{VG}* :: ('v $\Rightarrow$ 'v) *monoid* **where**
bijection_{VG} $\equiv$ *BijGroup* (*UNIV* :: 'v *set*)

Permutation action on the set of voters. Invariance under this action implies anonymity.

fun φ -anon :: ('a, 'v) *Election set* $\Rightarrow$ ('v $\Rightarrow$ 'v) $\Rightarrow$
 (('a, 'v) *Election* $\Rightarrow$ ('a, 'v) *Election*) **where**
 φ -anon $\mathcal{E}\ \pi = \text{extensional-continuation } (\text{rename } \pi)\ \mathcal{E}$

1.11 Result-Dependent Voting Rule Properties

```

theory Property-Interpretations
  imports Voting-Symmetry
          Result-Interpretations
begin

```

1.11.1 Property Definitions

The interpretation of equivariance properties generally depends on the result type. For example, neutrality for social choice rules means that single winners are renamed when the candidates in the votes are consistently renamed. For social welfare results, the complete result rankings must be renamed. New result-type-dependent definitions for properties can be added here.

```

Chapter 2

Refined Types

2.1 Preference List

```
theory Preference-List
  imports ../Preference-Relation
            HOL-Combinatorics.Multiset-Permutations
            List-Index.List-Index
begin
```

Preference lists derive from preference relations, ordered from most to least preferred alternative.

2.1.1 Well-Formedness

```
type-synonym 'a Preference-List = 'a list
```

```
abbreviation well-formed-l :: 'a Preference-List  $\Rightarrow$  bool where
  well-formed-l l  $\equiv$  distinct l
```

2.1.2 Auxiliary Lemmas About Lists

```
lemma is-arg-min-equal:
  fixes
    f g :: 'a  $\Rightarrow$  'b :: ord and
    S :: 'a set and
    x :: 'a
  assumes  $\forall x \in S. f\ x = g\ x$ 
  shows is-arg-min f ( $\lambda s. s \in S$ ) x = is-arg-min g ( $\lambda s. s \in S$ ) x
   $\langle$ proof $\rangle$ 
```

```
lemma list-cons-presv-finiteness:
  fixes
    A :: 'a set and
    S :: 'a list set
  assumes
```

$fin-A: finite\ A$ **and**
 $fin-B: finite\ S$
shows $finite\ \{a\#l \mid a\ l.\ a \in A \wedge l \in S\}$
 $\langle proof \rangle$

lemma *listset-finiteness*:
fixes $l :: 'a\ set\ list$
assumes $\forall\ i :: nat.\ i < length\ l \longrightarrow finite\ (l[i])$
shows $finite\ (listset\ l)$
 $\langle proof \rangle$

lemma *all-ls-elems-same-len*:
fixes $l :: 'a\ set\ list$
shows $\forall\ l' :: 'a\ list.\ l' \in listset\ l \longrightarrow length\ l' = length\ l$
 $\langle proof \rangle$

lemma *all-ls-elems-in-ls-set*:
fixes $l :: 'a\ set\ list$
shows $\forall\ l' \in listset\ l.\ \forall\ i :: nat < length\ l'.\ l'[i] \in l[i]$
 $\langle proof \rangle$

lemma *all-ls-in-ls-set*:
fixes $l :: 'a\ set\ list$
shows $\forall\ l'.\ length\ l' = length\ l$
 $\wedge (\forall\ i < length\ l'.\ l'[i] \in l[i]) \longrightarrow l' \in listset\ l$
 $\langle proof \rangle$

2.1.3 Ranking

Rank 1 is the top preference, rank 2 the second, and so on. Rank 0 does not exist.

fun *rank-l* :: $'a\ Preference-List \Rightarrow 'a \Rightarrow nat$ **where**
 $rank-l\ l\ a = (if\ a \in set\ l\ then\ index\ l\ a + 1\ else\ 0)$

fun *rank-l-idx* :: $'a\ Preference-List \Rightarrow 'a \Rightarrow nat$ **where**
 $rank-l-idx\ l\ a =$
 $(let\ i = index\ l\ a\ in$
 $if\ i = length\ l\ then\ 0\ else\ i + 1)$

lemma *rank-l-equiv*: $rank-l = rank-l-idx$
 $\langle proof \rangle$

lemma *rank-zero-imp-not-present*:
fixes
 $p :: 'a\ Preference-List$ **and**
 $a :: 'a$
assumes $rank-l\ p\ a = 0$
shows $a \notin set\ p$
 $\langle proof \rangle$

definition *above-l* :: 'a Preference-List $\Rightarrow$ 'a $\Rightarrow$ 'a Preference-List **where**

```

end

2.2 Preference (List) Profile

```

theory Profile-List
  imports ../Profile
           Preference-List
begin

```

2.2.1 Definition

A profile (list) contains one ballot for each voter.

type-synonym 'a Profile-List = 'a Preference-List list

type-synonym 'a Election-List = 'a set $\times$ 'a Profile-List

Abstraction from profile list to profile.

```

fun pl-to-pr- $\alpha$  :: 'a Profile-List  $\Rightarrow$  ('a, nat) Profile where
  pl-to-pr- $\alpha$  pl = ( $\lambda$  n. if n < length pl  $\wedge$  n  $\geq$  0
                      then (map pl- $\alpha$  pl)!n
                      else {})

```

```

lemma prof-abstr-presv-size:
  fixes p :: 'a Profile-List
  shows length p = length (to-list {0 ..< length p} (pl-to-pr- $\alpha$  p))
  <proof>

```

2.2.2 Refinement Proof

A profile on a finite set of alternatives A contains only ballots that are lists of linear orders on A.

definition profile-l :: 'a set $\Rightarrow$ 'a Profile-List $\Rightarrow$ bool **where**
 profile-l A p $\equiv \forall$ i < length p. ballot-on A (p!i)

```

lemma profile-list-refines-profile:
  fixes
    A :: 'a set and
    p :: 'a Profile-List
  assumes profile-l A p
  shows profile {0 ..< length p} A (pl-to-pr- $\alpha$  p)
  <proof>

```

end

2.3 Ordered Relation Type

```

theory Ordered-Relation

```

```

imports Preference-Relation
         ./Refined-Types/Preference-List
         HOL-Combinatorics.Multiset-Permutations
begin

lemma fin-ordered:

Chapter 3

Quotient Rules

3.1 Quotients of Equivalence Relations

```
theory Relation-Quotients
imports ../Social-Choice-Types/Symmetry-Of-Functions
begin
```

3.1.1 Definitions

```
fun singleton-set :: 'x set  $\Rightarrow$  'x where
  singleton-set s = (if card s = 1 then the-inv ( $\lambda$  x. {x}) s else undefined)
— This is undefined if card s  $\neq$  1. Note that "undefined = undefined" is the only
provable equality for undefined.
```

For a given function, we define a function on sets that maps each set to the unique image under f of its elements, if one exists. Otherwise, the result is undefined.

```
fun  $\pi_Q$  :: ('x  $\Rightarrow$  'y)  $\Rightarrow$  ('x set  $\Rightarrow$  'y) where
   $\pi_Q$  f s = singleton-set (f ` s)
```

For a given function f on sets and a mapping from elements to sets, we define a function on the set element type that maps each element to the image of its corresponding set under f. A natural mapping is from elements to their classes under a relation.

```
fun inv- $\pi_Q$  :: ('x  $\Rightarrow$  'x set)  $\Rightarrow$  ('x set  $\Rightarrow$  'y)  $\Rightarrow$  ('x  $\Rightarrow$  'y) where
  inv- $\pi_Q$  cls f x = f (cls x)
```

```
fun relation-class :: 'x rel  $\Rightarrow$  'x  $\Rightarrow$  'x set where
  relation-class r x = r `` {x}
```

3.1.2 Well-Definedness

```
lemma singleton-set-undef-if-card-neq-one:
fixes s :: 'x set
```

assumes $\text{card } s \neq 1$
shows $\text{singleton-set } s = \text{undefined}$
 $\langle \text{proof} \rangle$

lemma *singleton-set-def-if-card-one*:
fixes $s :: 'x \text{ set}$
assumes $\text{card } s = 1$
shows $\exists! x. x = \text{singleton-set } s \wedge \{x\} = s$
 $\langle \text{proof} \rangle$

If the given function is invariant under an equivalence relation, the induced function on sets is well-defined for all equivalence classes of that relation.

theorem *pass-to-quotient*:
fixes
 $f :: 'x \Rightarrow 'y$ **and**
 $r :: 'x \text{ rel}$ **and**
 $s :: 'x \text{ set}$
assumes
 f *respects* r **and**
 $\text{equiv } s \ r$
shows $\forall t \in s // r. \forall x \in t. \pi_Q f t = f x$
 $\langle \text{proof} \rangle$

A function on sets induces a function on the element type that is invariant under a given equivalence relation.

theorem *pass-to-quotient-inv*:
fixes
 $f :: 'x \text{ set} \Rightarrow 'x$ **and**
 $r :: 'x \text{ rel}$ **and**
 $s :: 'x \text{ set}$
assumes $\text{equiv } s \ r$
defines $\text{induced-fun} \equiv (\text{inv-}\pi_Q (\text{relation-class } r) f)$
shows
 induced-fun *respects* r **and**
 $\forall A \in s // r. \pi_Q \text{ induced-fun } A = f A$
 $\langle \text{proof} \rangle$

3.1.3 Equivalence Relations

lemma *restr-equals-restricted-rel*:
fixes
 $s \ t :: 'a \text{ set}$ **and**
 $r :: 'a \text{ rel}$
assumes
 $\text{closed-restricted-rel } r \ s \ t$ **and**
 $t \subseteq s$
shows $\text{restricted-rel } r \ t \ s = \text{Restr } r \ t$
 $\langle \text{proof} \rangle$

```

lemma equiv-rel-restr:
  fixes
     $s\ t :: 'x\ \text{set}$  and
     $r :: 'x\ \text{rel}$ 
  assumes
     $\text{equiv } s\ r$  and
     $t \subseteq s$ 
  shows  $\text{equiv } t\ (\text{Restr } r\ t)$ 
   $\langle \text{proof} \rangle$ 

lemma rel-ind-by-group-act-equiv:
  fixes
     $m :: 'x\ \text{monoid}$  and
     $s :: 'y\ \text{set}$  and
     $\varphi :: ('x, 'y)\ \text{binary-fun}$ 
  assumes  $\text{group-action } m\ s\ \varphi$ 
  shows  $\text{equiv } s\ (\text{action-induced-rel } (\text{carrier } m)\ s\ \varphi)$ 
   $\langle \text{proof} \rangle$ 

end

```

3.2 Quotients of Election Set Equivalences

```

theory Election-Quotients
  imports Relation-Quotients
    ../Social-Choice-Types/Voting-Symmetry
    ../Social-Choice-Types/Ordered-Relation
    HOL-Analysis.Convex
    HOL-Analysis.Cartesian-Space

begin

```

3.2.1 Auxiliary Lemmas

```

lemma obtain-partition:
  fixes
     $A :: 'a\ \text{set}$  and
     $V :: 'v\ \text{set}$  and
     $f :: 'v \Rightarrow \text{nat}$ 
  assumes
     $\text{finite } A$  and
     $\text{finite } V$  and
     $(\sum v :: 'v \in V. f\ v) = \text{card } A$ 
  shows  $\exists \mathcal{B} :: 'v \Rightarrow 'a\ \text{set.}$ 
     $A = \bigcup \{ \mathcal{B}\ v \mid v :: 'v. v \in V \} \wedge (\forall v :: 'v \in V. \text{card } (\mathcal{B}\ v) = f\ v)$ 
     $\wedge (\forall v\ v' :: 'v. v \neq v' \longrightarrow v \in V \wedge v' \in V \longrightarrow \mathcal{B}\ v \cap \mathcal{B}\ v' = \{ \})$ 
   $\langle \text{proof} \rangle$ 

```

3.2.2 Anonymity Quotient: Grid

fun *anonymity*_Q :: 'a set $\Rightarrow$ ('a, 'v) Election set set **where**
*anonymity*_Q A = quotient (elections- $\mathcal{A}$ A) (*anonymity*_R (elections- $\mathcal{A}$ A))

— Here, we count the occurrences of a ballot per election in a set of elections for which the occurrences of the ballot per election coincide for all elections in the set.

fun *vote-count*_Q :: 'a Preference-Relation $\Rightarrow$ ('a, 'v) Election set $\Rightarrow$ nat **where**
*vote-count*_Q r = π_Q (*vote-count* r)

fun *anonymity-class* :: ('a :: finite, 'v) Election set $\Rightarrow$
 (nat, 'a Ordered-Preference) vec **where**
anonymity-class C = (χ p. *vote-count*_Q (ord2pref p) C)

lemma *anon-rel-equiv*: equiv (elections- $\mathcal{A}$ UNIV) (*anonymity*_R (elections- $\mathcal{A}$ UNIV))
 <proof>

We assume that all elections consist of a fixed finite alternative set of size n and finite subsets of an infinite voter universe. Profiles are linear orders on the alternatives. Then, we can operate on the natural-number-vectors of dimension $n!$ instead of the equivalence classes of the anonymity relation: Each dimension corresponds to one possible linear order on the alternative set, i.e., the possible preferences. Each equivalence class of elections corresponds to a vector whose entries denote the amount of voters per election in that class who vote the respective corresponding preference.

theorem *anonymity_Q-isomorphism*:

assumes *infinite* (UNIV :: 'v set)

shows *bij-betw* (*anonymity-class* :: ('a :: finite, 'v) Election set
 $\Rightarrow$ nat^{nat} ('a Ordered-Preference)) (*anonymity*_Q (UNIV :: 'a set))
 (UNIV :: (nat^{nat} ('a Ordered-Preference)) set)

<proof>

3.2.3 Homogeneity Quotient: Simplex

fun *vote-fraction* :: 'a Preference-Relation $\Rightarrow$ ('a, 'v) Election $\Rightarrow$ rat **where**
vote-fraction r E =

(if finite (voters- $\mathcal{E}$ E) $\wedge$ voters- $\mathcal{E}$ E $\neq$ {}
 then Fract (*vote-count* r E) (card (voters- $\mathcal{E}$ E)) else 0)

shows $(\sum a \in A. \text{Fract } (f a) b) = \text{Fract } (\sum x \in A. f x) b$

$\langle proof \rangle$

Simplex Bijection

We assume all our elections to consist of a fixed finite set of n alternatives and finite subsets of an infinite universe of voters. Profiles are linear orders on the alternatives. Then we can work on the standard simplex of dimension $n!$ instead of the equivalence classes of the equivalence relation for anonymous and homogeneous voting rules: Each dimension corresponds to one possible linear order on the alternative set, i.e., the possible preferences. Each equivalence class of elections corresponds to a vector whose entries denote the fraction of voters per election in that class who vote the respective corresponding preference.

theorem *anonymity-homogeneity_Q-isomorphism*:

assumes *infinite* ($UNIV :: 'v \text{ set}$)

shows

bij-betw (*anonymity-homogeneity-class* :: $('a :: \text{finite}, 'v) \text{ Election set} \Rightarrow$
 $\text{rat}^{\sim} a \text{ Ordered-Preference})$ (*anonymity-homogeneity_Q* ($UNIV :: 'a \text{ set}$))
 $(\text{vote-simplex} :: (\text{rat}^{\sim} a \text{ Ordered-Preference}) \text{ set})$

$\langle proof \rangle$

Chapter 4

Component Types

4.1 Distance

```
theory Distance
imports HOL-Library.Extended-Real
          Social-Choice-Types/Voting-Symmetry
begin
```

A general distance on a set X is a mapping $d: X \times X \mapsto R \cup \{+\infty\}$ such that for every x, y, z in X , the following four conditions are satisfied:

- $d(x, y) \geq 0$ (non-negativity);
- $d(x, y) = 0$ if and only if $x = y$ (identity of indiscernibles);
- $d(x, y) = d(y, x)$ (symmetry);
- $d(x, y) \leq d(x, z) + d(z, y)$ (triangle inequality).

Moreover, a mapping that satisfies all but the second conditions is called a pseudo-distance, whereas a quasi-distance needs to satisfy the first three conditions (and not necessarily the last one).

4.1.1 Definition

```
type-synonym 'a Distance = 'a  $\Rightarrow$  'a  $\Rightarrow$  ereal
```

The un-curried version of a distance is defined on tuples.

```
fun tup :: 'a Distance  $\Rightarrow$  ('a * 'a  $\Rightarrow$  ereal) where
  tup d = ( $\lambda$  pair. d (fst pair) (snd pair))
```

```
definition distance :: 'a set  $\Rightarrow$  'a Distance  $\Rightarrow$  bool where
  distance S d  $\equiv \forall x y. x \in S \wedge y \in S \longrightarrow d x x = 0 \wedge 0 \leq d x y$ 
```

4.1.2 Conditions

definition *symmetric* :: 'a set $\Rightarrow$ 'a Distance $\Rightarrow$ bool **where**
symmetric $S\ d \equiv \forall\ x\ y. x \in S \wedge y \in S \longrightarrow d\ x\ y = d\ y\ x$

definition *triangle-ineq* :: 'a set $\Rightarrow$ 'a Distance $\Rightarrow$ bool **where**
triangle-ineq $S\ d \equiv \forall\ x\ y\ z. x \in S \wedge y \in S \wedge z \in S \longrightarrow d\ x\ z \leq d\ x\ y + d\ y\ z$

definition *eq-if-zero* :: 'a set $\Rightarrow$ 'a Distance $\Rightarrow$ bool **where**
eq-if-zero $S\ d \equiv \forall\ x\ y. x \in S \wedge y \in S \longrightarrow d\ x\ y = 0 \longrightarrow x = y$

definition *vote-distance* :: ('a Vote set $\Rightarrow$ 'a Vote Distance $\Rightarrow$ bool) $\Rightarrow$
'a Vote Distance $\Rightarrow$ bool **where**
vote-distance $\pi\ d \equiv \pi\ \{(A, p). \text{linear-order-on } A\ p \wedge \text{finite } A\}\ d$

definition *election-distance* :: (('a, 'v) Election set $\Rightarrow$
('a, 'v) Election Distance $\Rightarrow$ bool) $\Rightarrow$
('a, 'v) Election Distance $\Rightarrow$ bool **where**
election-distance $\pi\ d \equiv \pi\ \{(A, V, p). \text{finite-profile } V\ A\ p\}\ d$

4.1.3 Standard-Distance Property

definition *standard* :: ('a, 'v) Election Distance $\Rightarrow$ bool **where**
standard $d \equiv$
 $\forall\ A\ A'\ V\ V'\ p\ p'. A \neq A' \vee V \neq V' \longrightarrow d\ (A, V, p)\ (A', V', p') = \infty$

4.1.4 Auxiliary Lemmas

fun *arg-min-set* :: ('b $\Rightarrow$ 'a :: ord) $\Rightarrow$ 'b set $\Rightarrow$ 'b set **where**
arg-min-set $f\ A = \text{Collect } (\text{is-arg-min } f\ (\lambda\ a. a \in A))$

lemma *arg-min-subset*:

4.4 Electoral Module

```

theory Electoral-Module
  imports Social-Choice-Types/Property-Interpretations
begin

```

Electoral modules are the principal component type of the composable modules voting framework, as they are a generalization of voting rules in the sense of social choice functions. These are only the types used for electoral modules. Further restrictions are encompassed by the electoral-module predicate.

An electoral module does not need to make final decisions for all alternatives, but can instead defer the decision for some or all of them to other modules. Hence, electoral modules partition the received (possibly empty) set of alternatives into elected, rejected and deferred alternatives. In particular, any of those sets, e.g., the set of winning (elected) alternatives, may also be left empty, as long as they collectively still hold all the received alternatives. Just like a voting rule, an electoral module also receives a profile which holds the voters preferences, which, unlike a voting rule, consider only the (sub-)set of alternatives that the module receives.

4.4.1 Definition

An electoral module maps an election to a result. To enable currying, the Election type is not used here because that would require tuples.

```

type-synonym ('a, 'v, 'r) Electoral-Module = 'v set  $\Rightarrow$  'a set  $\Rightarrow$ 
  ('a, 'v) Profile  $\Rightarrow$  'r

```

```

fun funE :: ('v set  $\Rightarrow$  'a set  $\Rightarrow$  ('a, 'v) Profile  $\Rightarrow$  'r)  $\Rightarrow$ 
  (('a, 'v) Election  $\Rightarrow$  'r) where
  funE m = ( $\lambda$  E. m (voters- $\mathcal{E}$  E) (alternatives- $\mathcal{E}$  E) (profile- $\mathcal{E}$  E))

```

The next three functions take an electoral module and turn it into a function only outputting the elect, reject, or defer set respectively.

abbreviation $elect :: ('a, 'v, 'r \text{ Result}) \text{ Electoral-Module} \Rightarrow 'v \text{ set} \Rightarrow 'a \text{ set} \Rightarrow ('a, 'v) \text{ Profile} \Rightarrow 'r \text{ set}$ **where**
 $elect\ m\ V\ A\ p \equiv elect\text{-}r\ (m\ V\ A\ p)$

abbreviation $reject :: ('a, 'v, 'r \text{ Result}) \text{ Electoral-Module} \Rightarrow 'v \text{ set} \Rightarrow 'a \text{ set} \Rightarrow ('a, 'v) \text{ Profile} \Rightarrow 'r \text{ set}$ **where**
 $reject\ m\ V\ A\ p \equiv reject\text{-}r\ (m\ V\ A\ p)$

abbreviation $defer :: ('a, 'v, 'r \text{ Result}) \text{ Electoral-Module} \Rightarrow 'v \text{ set} \Rightarrow 'a \text{ set} \Rightarrow ('a, 'v) \text{ Profile} \Rightarrow 'r \text{ set}$ **where**
 $defer\ m\ V\ A\ p \equiv defer\text{-}r\ (m\ V\ A\ p)$

4.4.2 Auxiliary Definitions

Electoral modules partition a given set of alternatives A into a set of elected alternatives e , a set of rejected alternatives r , and a set of deferred alternatives d , using a profile. e , r , and d partition A . Electoral modules can be used as voting rules. They can also be composed in multiple structures to create more complex electoral modules.

fun $(in\ result)\ electoral\text{-}module :: ('a, 'v, ('r \text{ Result})) \text{ Electoral-Module} \Rightarrow bool$ **where**
 $electoral\text{-}module\ m = (\forall\ A\ V\ p.\ profile\ V\ A\ p \longrightarrow well\text{-}formed\ A\ (m\ V\ A\ p))$

fun $voters\text{-}determine\text{-}election :: ('a, 'v, ('r \text{ Result})) \text{ Electoral-Module} \Rightarrow bool$ **where**
 $voters\text{-}determine\text{-}election\ m = (\forall\ A\ V\ p\ p'. (\forall\ v \in V.\ p\ v = p'\ v) \longrightarrow m\ V\ A\ p = m\ V\ A\ p')$

lemma $(in\ result)\ electoral\text{-}modI:$
fixes $m :: ('a, 'v, ('r \text{ Result})) \text{ Electoral-Module}$
assumes $\forall\ A\ V\ p.\ profile\ V\ A\ p \longrightarrow well\text{-}formed\ A\ (m\ V\ A\ p)$
shows $electoral\text{-}module\ m$
 $\langle proof \rangle$

4.4.3 Auxiliary Properties

We only require voting rules to behave a specific way on admissible elections, i.e., elections that are valid profiles (= votes are linear orders on the alternatives). Note that we do not assume finiteness for the sets of voters or alternatives by default.

fun $anonymity\text{-}in :: ('a, 'v) \text{ Election set} \Rightarrow ('a, 'v, 'r) \text{ Electoral-Module} \Rightarrow bool$ **where**
 $anonymity\text{-}in\ X\ m = is\text{-}symmetry\ (fun_{\mathcal{E}}\ m)\ (Invariance\ (anonymity_{\mathcal{R}}\ X))$

fun $homogeneity\text{-}in :: ('a, 'v) \text{ Election set} \Rightarrow ('a, 'v, 'r \text{ Result}) \text{ Electoral-Module} \Rightarrow bool$ **where**

$\text{homogeneity-in } X \ m = \text{is-symmetry } (\text{fun}_{\mathcal{E}} \ m) \ (\text{Invariance } (\text{homogeneity}_{\mathcal{R}} \ X))$
 — This does not require any specific behaviour on infinite voter sets ... It might make sense to extend the definition to that case somehow.

fun $\text{homogeneity'-in} :: ('a, 'v :: \text{linorder}) \text{ Election set} \Rightarrow$
 $('a, 'v, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{homogeneity'-in } X \ m = \text{is-symmetry } (\text{fun}_{\mathcal{E}} \ m) \ (\text{Invariance } (\text{homogeneity}_{\mathcal{R}} \ 'X))$

fun $(\text{in result-properties}) \text{ neutrality-in} :: ('a, 'v) \text{ Election set} \Rightarrow$
 $('a, 'v, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{neutrality-in } X \ m =$
 $\text{is-symmetry } (\text{fun}_{\mathcal{E}} \ m) \ (\text{action-induced-equivariance } (\text{carrier bijection}_{\mathcal{AG}}) \ X$
 $(\varphi\text{-neutral } X) \ (\text{result-action } \psi))$

4.4.4 Social-Choice Modules

The following results require electoral modules to return social choice results, i.e., sets of elected, rejected and deferred alternatives. In order to export code, we use the hack provided by Locale-Code.

"defers n" is true for all electoral modules that defer exactly n alternatives, whenever there are n or more alternatives.

definition $\text{defers} :: \text{nat} \Rightarrow ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{defers } n \ m \equiv$
 $\text{SCF-result.electoral-module } m \wedge$
 $(\forall \ A \ V \ p. (\text{card } A \geq n \wedge \text{finite } A \wedge \text{profile } V \ A \ p)$
 $\longrightarrow \text{card } (\text{defer } m \ V \ A \ p) = n)$

"rejects n" is true for all electoral modules that reject exactly n alternatives, whenever there are n or more alternatives.

definition $\text{rejects} :: \text{nat} \Rightarrow ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{rejects } n \ m \equiv$
 $\text{SCF-result.electoral-module } m \wedge$
 $(\forall \ A \ V \ p. (\text{card } A \geq n \wedge \text{finite } A \wedge \text{profile } V \ A \ p)$
 $\longrightarrow \text{card } (\text{reject } m \ V \ A \ p) = n)$

As opposed to "rejects", "eliminates" allows to stop rejecting if no alternatives were to remain.

definition $\text{eliminates} :: \text{nat} \Rightarrow ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{eliminates } n \ m \equiv$
 $\text{SCF-result.electoral-module } m \wedge$
 $(\forall \ A \ V \ p. (\text{card } A > n \wedge \text{profile } V \ A \ p) \longrightarrow \text{card } (\text{reject } m \ V \ A \ p) = n)$

"elects n" is true for all electoral modules that elect exactly n alternatives, whenever there are n or more alternatives.

definition $\text{elects} :: \text{nat} \Rightarrow ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$ **where**
 $\text{elects } n \ m \equiv$

$$\text{SCF-result.electoral-module } m \wedge \\ (\forall A V p. (\text{card } A \geq n \wedge \text{profile } V A p) \longrightarrow \text{card } (\text{elect } m V A p) = n)$$

An electoral module is independent of an alternative a iff a 's ranking does not influence the outcome.

definition *indep-of-alt* :: ($'a, 'v, 'a \text{ Result}$) *Electoral-Module* $\Rightarrow 'v \text{ set} \Rightarrow 'a \text{ set} \Rightarrow 'a \Rightarrow \text{bool}$ **where**
indep-of-alt $m V A a \equiv$
 $\text{SCF-result.electoral-module } m$
 $\wedge (\forall p q. \text{equiv-prof-except-}a V A p q a \longrightarrow m V A p = m V A q)$

definition *unique-winner-if-profile-non-empty* :: ($'a, 'v, 'a \text{ Result}$) *Electoral-Module* $\Rightarrow \text{bool}$ **where**
unique-winner-if-profile-non-empty $m \equiv$
 $\text{SCF-result.electoral-module } m \wedge$
 $(\forall A V p. (A \neq \{\} \wedge V \neq \{\} \wedge \text{profile } V A p) \longrightarrow$
 $(\exists a \in A. m V A p = (\{a\}, A - \{a\}, \{\})))$

4.4.5 Equivalence Definitions

definition *prof-contains-result* :: ($'a, 'v, 'a \text{ Result}$) *Electoral-Module* $\Rightarrow 'v \text{ set} \Rightarrow 'a \text{ set} \Rightarrow ('a, 'v) \text{ Profile} \Rightarrow ('a, 'v) \text{ Profile} \Rightarrow 'a \Rightarrow \text{bool}$ **where**
prof-contains-result $m V A p q a \equiv$

fixes $m :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes *electing* m
shows *non-blocking* m
 $\langle proof \rangle$

4.4.9 Properties

An electoral module is non-electing iff it never elects an alternative.

definition *non-electing* $:: ('a, 'v, 'a\ Result)\ Electoral\ Module \Rightarrow bool$ **where**
 $non-electing\ m \equiv$
 $SCF-result.electoral-module\ m$
 $\wedge (\forall\ A\ V\ p. profile\ V\ A\ p \longrightarrow elect\ m\ V\ A\ p = \{\})$

lemma *single-rej-decr-def-card*:
fixes
 $m :: ('a, 'v, 'a\ Result)\ Electoral\ Module$ **and**
 $A :: 'a\ set$ **and**
 $V :: 'v\ set$ **and**
 $p :: ('a, 'v)\ Profile$
assumes
rejecting: *rejects 1* m **and**
non-electing: *non-electing* m **and**
f-prof: *finite-profile* $V\ A\ p$
shows $card\ (defer\ m\ V\ A\ p) = card\ A - 1$
 $\langle proof \rangle$

lemma *single-elim-decr-def-card'*:
fixes
 $m :: ('a, 'v, 'a\ Result)\ Electoral\ Module$ **and**
 $A :: 'a\ set$ **and**
 $V :: 'v\ set$ **and**
 $p :: ('a, 'v)\ Profile$
assumes
eliminating: *eliminates 1* m **and**
non-electing: *non-electing* m **and**
not-empty: $card\ A > 1$ **and**
prof-p: *profile* $V\ A\ p$
shows $card\ (defer\ m\ V\ A\ p) = card\ A - 1$
 $\langle proof \rangle$

An electoral module is defer-deciding iff this module chooses exactly 1 alternative to defer and rejects any other alternative. Note that ‘rejects n-1 m’ can be omitted due to the well-formedness property.

definition *defer-deciding* $:: ('a, 'v, 'a\ Result)\ Electoral\ Module \Rightarrow bool$ **where**

defer-deciding $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge non\text{-}electing\ m \wedge defers\ 1\ m$

An electoral module decrements iff this module rejects at least one alternative whenever possible ($|A| > 1$).

definition *decrementing* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
decrementing $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p.\ profile\ V\ A\ p \wedge card\ A > 1 \longrightarrow card\ (reject\ m\ V\ A\ p) \geq 1)$

definition *defer-condorcet-consistency* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
defer-condorcet-consistency $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p\ a.\ condorcet\text{-}winner\ V\ A\ p\ a \longrightarrow$
 $(m\ V\ A\ p = (\{\}, A - (defer\ m\ V\ A\ p), \{d \in A.\ condorcet\text{-}winner\ V\ A\ p\ d\})))$

definition *condorcet-compatibility* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
condorcet-compatibility $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p\ a.\ condorcet\text{-}winner\ V\ A\ p\ a \longrightarrow$
 $(a \notin reject\ m\ V\ A\ p \wedge$
 $(\forall\ b.\ \neg\ condorcet\text{-}winner\ V\ A\ p\ b \longrightarrow b \notin elect\ m\ V\ A\ p) \wedge$
 $(a \in elect\ m\ V\ A\ p \longrightarrow$
 $(\forall\ b \in A.\ \neg\ condorcet\text{-}winner\ V\ A\ p\ b \longrightarrow b \in reject\ m\ V\ A\ p))))$

An electoral module is defer-monotone iff, when a deferred alternative is lifted, this alternative remains deferred.

definition *defer-monotonicity* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
defer-monotonicity $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p\ q\ a.$
 $(a \in defer\ m\ V\ A\ p \wedge lifted\ V\ A\ p\ q\ a) \longrightarrow a \in defer\ m\ V\ A\ q)$

An electoral module is defer-lift-invariant iff lifting a deferred alternative does not affect the outcome.

definition *defer-lift-invariance* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
defer-lift-invariance $m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p\ q\ a.\ (a \in (defer\ m\ V\ A\ p) \wedge lifted\ V\ A\ p\ q\ a)$
 $\longrightarrow m\ V\ A\ p = m\ V\ A\ q)$

fun *dli-rel* $:: ('a, 'v, 'a\ Result)\ Electoral\text{-}Module \Rightarrow ('a, 'v)\ Election\ rel$ **where**
dli-rel $m = \{((A, V, p), (A, V, q)) \mid A\ V\ p\ q.\ (\exists\ a \in defer\ m\ V\ A\ p.\ lifted\ V\ A\ p\ q\ a)\}$

lemma *rewrite-dli-as-invariance*:

fixes $m :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
shows
 $\text{defer-lift-invariance } m =$
 $(\text{SCF-result.electoral-module } m$
 $\quad \wedge (\text{is-symmetry } (\text{fun}_{\mathcal{E}} m) (\text{Invariance } (\text{dli-rel } m))))$
 $\langle \text{proof} \rangle$

Two electoral modules are disjoint-compatible if they only make decisions over disjoint sets of alternatives. Electoral modules reject alternatives for which they make no decision.

definition $\text{disjoint-compatibility} :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$
 $(('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}) \text{ where}$
 $\text{disjoint-compatibility } m \ n \equiv$

shows $\text{disjoint-compatibility } n \ m$
 $\langle \text{proof} \rangle$

Every electoral module which is defer-lift-invariant is also defer-monotone.

theorem $dl\text{-inv-imp-def-mono}[simp]:$
fixes $m :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes $\text{defer-lift-invariance } m$
shows $\text{defer-monotonicity } m$
 $\langle \text{proof} \rangle$

4.4.11 Social-Choice Properties

Condorcet Consistency

definition $\text{condorcet-consistency} :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$
 bool **where**
 $\text{condorcet-consistency } m \equiv$
 $SCF\text{-result.electoral-module } m \wedge$
 $(\forall \ A \ V \ p \ a. \text{condorcet-winner } V \ A \ p \ a \longrightarrow$
 $(m \ V \ A \ p = (\{e \in A. \text{condorcet-winner } V \ A \ p \ e\}, A - (\text{elect } m \ V \ A \ p), \{\})))$

Anonymity

An electoral module is anonymous iff the result is invariant under renamings of voters, i.e., any permutation of the voter set that does not change the preferences leads to an identical result.

definition $(\text{in result}) \text{ anonymity} :: ('a, 'v, ('r \text{ Result})) \text{ Electoral-Module} \Rightarrow$

bool where
 $\text{anonymity } m \equiv$
 $\text{electoral-module } m \wedge$
 $(\forall A V p \pi :: ('v \Rightarrow 'v)).$
 $\text{bij } \pi \longrightarrow (\text{let } (A', V', q) = (\text{rename } \pi (A, V, p)) \text{ in}$
 $\text{profile } V A p \wedge \text{profile } V' A' q \longrightarrow m V A p = m V' A' q))$

Anonymity can alternatively be described as invariance under the voter permutation group acting on elections via the rename function.

fun $\text{anonymity-finite}' :: ('a, 'v, 'r) \text{ Electoral-Module} \Rightarrow \text{bool where}$
 $\text{anonymity-finite}' m = \text{anonymity-in well-formed-finite-}\mathcal{V}\text{-elections } m$

fun $\text{anonymity}' :: ('a, 'v, 'r) \text{ Electoral-Module} \Rightarrow \text{bool where}$
 $\text{anonymity}' m = \text{anonymity-in well-formed-elections } m$

Homogeneity

A voting rule is homogeneous if copying an election does not change the result. For ordered voter types and finite elections, we use the notion of copying ballot lists to define copying an election. The more general definition of homogeneity for unordered voter types already implies anonymity.

fun $\text{homogeneity} :: ('a, 'v, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool where}$
 $\text{homogeneity } m = \text{homogeneity-in well-formed-finite-}\mathcal{V}\text{-elections } m$

fun $\text{homogeneity}' :: ('a, 'v :: \text{linorder}, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool where}$
 $\text{homogeneity}' m = \text{homogeneity}'\text{-in well-formed-finite-}\mathcal{V}\text{-elections } m$

fun $\text{homogeneity-inf} :: ('a, 'v, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool where}$
 $\text{homogeneity-inf } m = \text{homogeneity-in well-formed-elections } m$

fun $\text{homogeneity-inf}' :: ('a, 'v :: \text{linorder}, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool}$
where
 $\text{homogeneity-inf}' m = \text{homogeneity}'\text{-in well-formed-elections } m$

Neutrality

Neutrality is equivariance under consistent renaming of candidates in the candidate set and election results.

fun $(\text{in result-properties}) \text{ neutrality} :: ('a, 'v, 'b \text{ Result}) \text{ Electoral-Module} \Rightarrow$
 bool where
 $\text{neutrality } m = \text{neutrality-in well-formed-elections } m$

(Weak) Monotonicity

An electoral module is monotone iff when an elected alternative is lifted, this alternative remains elected.

definition $\text{monotonicity} :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow \text{bool where}$

$monotonicity\ m \equiv$
 $SCF\text{-}result.electoral\text{-}module\ m \wedge$
 $(\forall\ A\ V\ p\ q\ a. a \in elect\ m\ V\ A\ p \wedge lifted\ V\ A\ p\ q\ a \longrightarrow a \in elect\ m\ V\ A\ q)$

4.4.12 Social-Welfare Properties

Reversal Symmetry

A social welfare rule is reversal symmetric if reversing all voters' preferences reverses the result rankings as well.

definition $reversal\text{-}symmetry\text{-}in :: ('a, 'v)\ Election\ set \Rightarrow$
 $('a, 'v, 'a\ rel\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
 $reversal\text{-}symmetry\text{-}in\ X\ m \equiv$
 $is\text{-}symmetry\ (fun_{\mathcal{E}}\ m)\ (action\text{-}induced\text{-}equivariance\ (carrier\ reversal_{\mathcal{G}})\ X$
 $(\varphi\text{-}reverse\ X)\ (result\text{-}action\ \psi\text{-}reverse))$

fun $reversal\text{-}symmetry :: ('a, 'v, 'a\ rel\ Result)\ Electoral\text{-}Module \Rightarrow bool$ **where**
 $reversal\text{-}symmetry\ m = reversal\text{-}symmetry\text{-}in\ well\text{-}formed\text{-}elections\ m$

4.4.13 Property Relations

fixes $m :: ('a, 'v, ('r\ Result))\ Electoral\text{-}Module$
assumes $homogeneity\ m$
shows $anonymity\text{-}finite'\ m$
 $\langle proof \rangle$

end

4.5 Electoral Module on Election Quotients

```

theory Quotient-Module
  imports Quotients/Relation-Quotients
           Electoral-Module
begin

lemma invariance-is-congruence:
  fixes
     $m :: ('a, 'v, 'r) \text{ Electoral-Module}$  and
     $r :: ('a, 'v) \text{ Election rel}$ 
  shows  $\text{is-symmetry } (\text{fun}_{\mathcal{E}} m) (\text{Invariance } r) = \text{fun}_{\mathcal{E}} m \text{ respects } r$ 
   $\langle \text{proof} \rangle$ 

lemma invariance-is-congruence':
  fixes
     $f :: 'x \Rightarrow 'y$  and
     $r :: 'x \text{ rel}$ 
  shows  $\text{is-symmetry } f (\text{Invariance } r) = f \text{ respects } r$ 
   $\langle \text{proof} \rangle$ 

theorem pass-to-election-quotient:
  fixes
     $m :: ('a, 'v, 'r) \text{ Electoral-Module}$  and
     $r :: ('a, 'v) \text{ Election rel}$  and
     $X :: ('a, 'v) \text{ Election set}$ 
  assumes
     $\text{equiv } X \text{ } r$  and
     $\text{is-symmetry } (\text{fun}_{\mathcal{E}} m) (\text{Invariance } r)$ 
  shows  $\forall A \in X // r. \forall E \in A. \pi_{\mathcal{Q}} (\text{fun}_{\mathcal{E}} m) A = \text{fun}_{\mathcal{E}} m E$ 
   $\langle \text{proof} \rangle$ 

end

```

4.6 Evaluation Function

```

theory Evaluation-Function
  imports Social-Choice-Types/Profile
begin

```

This is the evaluation function. From a set of currently eligible alternatives, the evaluation function computes a numerical value that is then to be used for further (s)election, e.g., by the elimination module.

4.6.1 Definition

type-synonym $(\text{'a}, \text{'v}) \text{ Evaluation-Function} =$
 $\text{'v set} \Rightarrow \text{'a} \Rightarrow \text{'a set} \Rightarrow (\text{'a}, \text{'v}) \text{ Profile} \Rightarrow \text{enat}$

4.6.2 Property

An Evaluation function is a Condorcet-rating iff the following holds: If a Condorcet Winner w exists, w and only w has the highest value.

definition $\text{condorcet-rating} :: (\text{'a}, \text{'v}) \text{ Evaluation-Function} \Rightarrow \text{bool}$ **where**
 $\text{condorcet-rating } f \equiv$
 $\forall A V p w . \text{condorcet-winner } V A p w \longrightarrow$
 $(\forall l \in A . l \neq w \longrightarrow f V l A p < f V w A p)$

An Evaluation function is dependent only on the participating voters iff it is invariant under profile changes that only impact non-voters.

fun $\text{voters-determine-evaluation} :: (\text{'a}, \text{'v}) \text{ Evaluation-Function} \Rightarrow \text{bool}$ **where**
 $\text{voters-determine-evaluation } f =$
 $(\forall A V p p'. (\forall v \in V . p v = p' v) \longrightarrow (\forall a \in A . f V a A p = f V a A p'))$

4.6.3 Theorems

If e is Condorcet-rating, the following holds: If a Condorcet winner w exists, w has the maximum evaluation value.

theorem $\text{cond-winner-imp-max-eval-val}$:
fixes
 $e :: (\text{'a}, \text{'v}) \text{ Evaluation-Function}$ **and**
 $A :: \text{'a set}$ **and**
 $V :: \text{'v set}$ **and**
 $p :: (\text{'a}, \text{'v}) \text{ Profile}$ **and**
 $a :: \text{'a}$
assumes
 $\text{rating: condorcet-rating } e$ **and**
 $f\text{-prof: finite-profile } V A p$ **and**
 $\text{winner: condorcet-winner } V A p a$
shows $e V a A p = \text{Max } \{e V b A p \mid b. b \in A\}$
 $\langle \text{proof} \rangle$

If e is Condorcet-rating, the following holds: If a Condorcet Winner w exists, a non-Condorcet winner has a value lower than the maximum evaluation value.

theorem $\text{non-cond-winner-not-max-eval}$:
fixes
 $e :: (\text{'a}, \text{'v}) \text{ Evaluation-Function}$ **and**
 $A :: \text{'a set}$ **and**
 $V :: \text{'v set}$ **and**
 $p :: (\text{'a}, \text{'v}) \text{ Profile}$ **and**

```

    a b :: 'a
assumes
    rating: condorcet-rating e and
    f-prof: finite-profile V A p and
    winner: condorcet-winner V A p a and
    lin-A: b ∈ A and
    loser: a ≠ b
shows e V b A p < Max {e V c A p | c. c ∈ A}
⟨proof⟩

end

```

4.7 Elimination Module

```

theory Elimination-Module
imports Evaluation-Function
    Electoral-Module
begin

```

This is the elimination module. It rejects a set of alternatives only if these are not all alternatives. The alternatives potentially to be rejected are put in a so-called elimination set. These are all alternatives that score below a preset threshold value that depends on the specific voting rule.

4.7.1 General Definitions

```

type-synonym Threshold-Value = enat

type-synonym Threshold-Relation = enat ⇒ enat ⇒ bool

type-synonym ('a, 'v) Electoral-Set = 'v set ⇒ 'a set ⇒ ('a, 'v) Profile ⇒ 'a set

fun elimination-set :: ('a, 'v) Evaluation-Function ⇒ Threshold-Value ⇒
    Threshold-Relation ⇒ ('a, 'v) Electoral-Set where
    elimination-set e t r V A p = (if finite A then {a ∈ A . r (e V a A p) t} else {})

fun average :: ('a, 'v) Evaluation-Function ⇒ 'v set ⇒ 'a set ⇒ ('a, 'v) Profile ⇒
    Threshold-Value where
    average e V A p = (let sum-eval = (∑ x ∈ A. e V x A p) in
        if sum-eval = ∞ then ∞ else the-enat sum-eval div card A)

```

4.7.2 Social-Choice Definitions

```

fun elimination-module :: ('a, 'v) Evaluation-Function ⇒ Threshold-Value ⇒
    Threshold-Relation ⇒ ('a, 'v, 'a Result) Electoral-Module where

```

$\text{elimination-module } e \ t \ r \ V \ A \ p =$
 (if $\text{elimination-set } e \ t \ r \ V \ A \ p \neq A$
 then $(\{\}, \text{elimination-set } e \ t \ r \ V \ A \ p, A - \text{elimination-set } e \ t \ r \ V \ A \ p)$
 else $(\{\}, \{\}, A)$)

4.7.3 Social-Choice Eliminators

fun $\text{less-eliminator} :: ('a, 'v) \text{Evaluation-Function} \Rightarrow \text{Threshold-Value} \Rightarrow$
 $('a, 'v, 'a \text{Result}) \text{Electoral-Module} \textbf{where}$

```

end

4.8 Aggregator

```

theory Aggregator
  imports Social-Choice-Types/Social-Choice-Result

```

begin

An aggregator gets two partitions (results of electoral modules) as input and output another partition. They are used to aggregate results of parallel composed electoral modules. They are commutative, i.e., the order of the aggregated modules does not affect the resulting aggregation. Moreover, they are conservative in the sense that the resulting decisions are subsets of the two given partitions' decisions.

4.8.1 Definition

type-synonym *'a Aggregator* = *'a set* $\Rightarrow$ *'a Result* $\Rightarrow$ *'a Result* $\Rightarrow$ *'a Result*

definition *aggregator* :: *'a Aggregator* $\Rightarrow$ *bool* **where**

aggregator agg $\equiv$
 $\forall A e e' d d' r r'.$
 $(\text{well-formed-SCF } A (e, r, d) \wedge \text{well-formed-SCF } A (e', r', d')) \longrightarrow$
 $\text{well-formed-SCF } A (\text{agg } A (e, r, d) (e', r', d'))$

4.8.2 Properties

4.10 Termination Condition

theory *Termination-Condition*
imports *Social-Choice-Types/Result*

begin

The termination condition is used in loops. It decides whether or not to terminate the loop after each iteration, depending on the current state of the loop.

type-synonym *'r Termination-Condition = 'r Result $\Rightarrow$ bool*

end

4.11 Defer Equal Condition

theory *Defer-Equal-Condition*

imports *Termination-Condition*

begin

This is a family of termination conditions. For a natural number n , the according defer-equal condition is true if and only if the given result's defer-set contains exactly n elements.

fun *defer-equal-condition* :: *nat $\Rightarrow$ 'a Termination-Condition* **where**
 defer-equal-condition n (e, r, d) = ($\text{card } d = n$)

end

Chapter 5

Basic Modules

5.1 Defer Module

```
theory Defer-Module
  imports Component-Types/Electoral-Module
begin
```

The defer module is not concerned about the voter's ballots, and simply defers all alternatives. It is primarily used for defining an empty loop.

5.1.1 Definition

```
fun defer-module :: ('a, 'v, 'a Result) Electoral-Module where
  defer-module V A p = ({}, {}, A)
```

5.1.2 Soundness

```
theorem def-mod-sound[simp]: SCF-result.electoral-module defer-module
  <proof>
```

5.1.3 Properties

```
theorem def-mod-non-electing: non-electing defer-module
  <proof>
```

```
theorem def-mod-def-lift-inv: defer-lift-invariance defer-module
  <proof>
```

```
end
```

5.2 Elect-First Module

```
theory Elect-First-Module
```

```

imports Component-Types/Electoral-Module
begin

```

The elect first module elects the alternative that is most preferred on the first ballot and rejects all other alternatives.

5.2.1 Definition

```

fun least :: 'v :: wellorder set  $\Rightarrow$  'v where
  least V = (Least ( $\lambda$  v. v  $\in$  V))

```

```

fun elect-first-module :: ('a, 'v :: wellorder, 'a Result) Electoral-Module where
  elect-first-module V A p =
    ({a  $\in$  A. above (p (least V)) a = {a}},
     {a  $\in$  A. above (p (least V)) a  $\neq$  {a}},
     {})

```

5.2.2 Soundness

```

theorem elect-first-mod-sound: SCF-result.electoral-module elect-first-module
  <proof>

```

```

end

```

5.3 Consensus Class

```

theory Consensus-Class
  imports Consensus
           ../Defer-Module
           ../Elect-First-Module
begin

```

A consensus class is a pair of a set of elections and a mapping that assigns a unique alternative to each election in that set (of elections). This alternative is then called the consensus alternative (winner). Here, we model the mapping by an electoral module that defers alternatives which are not in the consensus.

5.3.1 Definition

```

type-synonym ('a, 'v, 'r) Consensus-Class =
  ('a, 'v) Consensus  $\times$  ('a, 'v, 'r) Electoral-Module

```

```

fun consensus-K :: ('a, 'v, 'r) Consensus-Class  $\Rightarrow$  ('a, 'v) Consensus where
  consensus-K K = fst K

```

fun $\text{rule-}\mathcal{K} :: ('a, 'v, 'r) \text{ Consensus-Class} \Rightarrow ('a, 'v, 'r) \text{ Electoral-Module}$ **where**
 $\text{rule-}\mathcal{K} K = \text{snd } K$

5.3.2 Consensus Choice

Returns those consensus elections on a given alternative and voter set from a given consensus that are mapped to the given unique winner by a given consensus rule.

fun $\mathcal{K}_\mathcal{E} :: ('a, 'v, 'r \text{ Result}) \text{ Consensus-Class} \Rightarrow ('a, 'v) \text{ Election set}$ **where**
 $\mathcal{K}_\mathcal{E} K w =$
 $\{(A, V, p) \mid A \ V \ p. (\text{consensus-}\mathcal{K} K) (A, V, p) \wedge \text{finite-profile } V \ A \ p$
 $\wedge \text{elect } (\text{rule-}\mathcal{K} K) \ V \ A \ p = \{w\}\}$

fun $\text{elections-}\mathcal{K} :: ('a, 'v, 'r \text{ Result}) \text{ Consensus-Class} \Rightarrow ('a, 'v) \text{ Election set}$ **where**
 $\text{elections-}\mathcal{K} K = \bigcup ((\mathcal{K}_\mathcal{E} K) \text{ 'UNIV})$

A consensus class is deemed well-formed if the result of its mapping is completely determined by its consensus, the elected set of the electoral module's result.

definition $\text{well-formed} :: ('a, 'v) \text{ Consensus} \Rightarrow ('a, 'v, 'r) \text{ Electoral-Module} \Rightarrow$
 bool **where**
 $\text{well-formed } c \ m \equiv$
 $\forall \ A \ V \ V' \ p \ p'.$
 $\text{profile } V \ A \ p \wedge \text{profile } V' \ A \ p' \wedge c \ (A, V, p) \wedge c \ (A, V', p')$
 $\longrightarrow m \ V \ A \ p = m \ V' \ A \ p'$

A sensible social choice rule for a given arbitrary consensus and social choice rule r is the one that chooses the result of r for all consensus elections and defers all candidates otherwise.

fun $\text{consensus-choice} :: ('a, 'v) \text{ Consensus} \Rightarrow$
 $('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$
 $('a, 'v, 'a \text{ Result}) \text{ Consensus-Class}$ **where**
 $\text{consensus-choice } c \ m =$
 $(\text{let}$
 $w = (\lambda \ V \ A \ p. \text{if } c \ (A, V, p) \text{ then } m \ V \ A \ p \text{ else defer-module } V \ A \ p)$
 $\text{in } (c, w))$

5.4 Distance Rationalization

theory *Distance-Rationalization*

imports *Social-Choice-Types/Refined-Types/Preference-List*
Consensus-Class
Distance

begin

A distance rationalization of a voting rule is its interpretation as a procedure that elects an uncontroversial winner if there is one, and otherwise elects the alternatives that are as close to becoming an uncontroversial winner as possible. Within general distance rationalization, a voting rule is characterized by a distance on profiles and a consensus class.

5.4.1 Definitions

Returns the distance of an election to the preimage of a unique winner under the given consensus elections and consensus rule.

fun *score* :: ('a, 'v) Election Distance $\Rightarrow$ ('a, 'v, 'r Result) Consensus-Class $\Rightarrow$
('a, 'v) Election $\Rightarrow$ 'r $\Rightarrow$ ereal **where**
score *d K E w* = Inf (*d E* ' ($\mathcal{K}_{\mathcal{E}}$ *K w*))

fun (**in result**) $\mathcal{R}_{\mathcal{W}}$:: ('a, 'v) Election Distance $\Rightarrow$
('a, 'v, 'r Result) Consensus-Class $\Rightarrow$ 'v set $\Rightarrow$ 'a set $\Rightarrow$ ('a, 'v) Profile $\Rightarrow$
'r set **where**
 $\mathcal{R}_{\mathcal{W}}$ *d K V A p* = arg-min-set (*score d K (A, V, p)*) (*limit A UNIV*)

fun (**in result**) *distance- $\mathcal{R}$* :: ('a, 'v) Election Distance $\Rightarrow$

5.9 Drop Module

```

theory Drop-Module
  imports Component-Types/Electoral-Module

```

begin

This is a family of electoral modules. For a natural number n and a lexicon (linear order) r of all alternatives, the according drop module rejects the lexicographically first n alternatives (from A) and defers the rest. It is primarily used as counterpart to the pass module in a parallel composition, in order to segment the alternatives into two groups.

5.9.1 Definition

```
fun drop-module :: nat  $\Rightarrow$  'a Preference-Relation  $\Rightarrow$ 
  ('a, 'v, 'a Result) Electoral-Module where
  drop-module n r V A p =
    ({},
     {a  $\in$  A. rank (limit A r) a  $\leq$  n},
     {a  $\in$  A. rank (limit A r) a  $>$  n})
```

5.9.2 Soundness

```
theorem drop-mod-sound[simp]:
  fixes
    r :: 'a Preference-Relation and
    n :: nat
  shows SCF-result.electoral-module (drop-module n r)
  <proof>
```

```
lemma voters-determine-drop-mod:

 fixes *r* :: 'a *Preference-Relation*
 assumes *linear-order* *r*
 shows *defers* 0 (*pass-module* 0 *r*)
 ⟨*proof*⟩

For any natural number *n* and any linear order, the according pass module defers *n* alternatives (if there are *n* alternatives). NOTE: The induction proof is still missing. The following are the proofs for *n*=1 and *n*=2.

theorem *pass-one-mod-def-one[simp]*:
 fixes *r* :: 'a *Preference-Relation*
 assumes *linear-order* *r*

```

    shows defers 1 (pass-module 1 r)
  <proof>

theorem pass-two-mod-def-two:
  fixes r :: 'a Preference-Relation
  assumes linear-order r
  shows defers 2 (pass-module 2 r)
  <proof>

end

```

5.11 Elect Module

```

theory Elect-Module
  imports Component-Types/Electoral-Module
begin

```

The elect module is not concerned about the voter's ballots, and just elects all alternatives. It is primarily used in sequence after an electoral module that only defers alternatives to finalize the decision, thereby inducing a proper voting rule in the social choice sense.

5.11.1 Definition

```

fun elect-module :: ('a, 'v, 'a Result) Electoral-Module where
  elect-module V A p = (A, {}, {})

```

5.11.2 Soundness

```

theorem elect-mod-sound[simp]: SCF-result.electoral-module elect-module
  <proof>

```

lemma elect-mod-only-voters: voters-determine-election elect-module
  <proof>

```

5.11.3 Electing

```

theorem elect-mod-electing[simp]: electing elect-module
  <proof>

```

```

end

```

5.12 Plurality Module

```
theory Plurality-Module
imports Component-Types/Elimination-Module
begin
```

The plurality module implements the plurality voting rule. The plurality rule elects all modules with the maximum amount of top preferences among all alternatives, and rejects all the other alternatives. It is electing and induces the classical plurality (voting) rule from social-choice theory.

5.12.1 Definition

```
fun plurality-score :: ('a, 'v) Evaluation-Function where
  plurality-score V x A p = win-count V p x
```

```
fun plurality :: ('a, 'v, 'a Result) Electoral-Module where
  plurality V A p = max-eliminator plurality-score V A p
```

```
fun plurality' :: ('a, 'v, 'a Result) Electoral-Module where
  plurality' V A p =
    (if finite A
     then ({},
           {a ∈ A. ∃ x ∈ A. win-count V p x > win-count V p a},
           {a ∈ A. ∀ x ∈ A. win-count V p x ≤ win-count V p a}),
     else ({}, {}, A))
```

```
lemma enat-leq-enat-set-max:
```

 ⟨proof⟩

end

5.13 Borda Module

theory *Borda-Module*
imports *Component-Types/Elimination-Module*
begin

This is the Borda module used by the Borda rule. The Borda rule is a voting rule, where on each ballot, each alternative is assigned a score that depends on how many alternatives are ranked below. The sum of all such scores for an alternative is hence called their Borda score. The alternative with the highest Borda score is elected. The module implemented herein only rejects the alternatives not elected by the voting rule, and defers the alternatives that would be elected by the full voting rule.

5.13.1 Definition

```

fun borda-score :: ('a, 'v) Evaluation-Function where
  borda-score V x A p = (∑ y ∈ A. (prefer-count V p x y))

fun borda :: ('a, 'v, 'a Result) Electoral-Module where
  borda V A p = max-eliminator borda-score V A p

```

5.13.4 Non-Electing

The Borda module is non-electing.

theorem *borda-mod-non-electing[simp]: non-electing borda*
<proof>

end

5.14 Condorcet Module

theory *Condorcet-Module*
imports *Component-Types/Elimination-Module*
begin

This is the Condorcet module used by the Condorcet (voting) rule. The Condorcet rule is a voting rule that implements the Condorcet criterion, i.e., it elects the Condorcet winner if it exists, otherwise a tie remains between all alternatives. The module implemented herein only rejects the alternatives not elected by the voting rule, and defers the alternatives that would be elected by the full voting rule.

5.14.1 Definition

fun *condorcet-score* :: ('a, 'v) *Evaluation-Function* **where**
condorcet-score *V* *x* *A* *p* = (*if condorcet-winner* *V* *A* *p* *x* *then 1 else 0*)

fun *condorcet* :: ('a, 'v, 'a *Result*) *Electoral-Module* **where**
condorcet *V* *A* *p* = (*max-eliminator condorcet-score*) *V* *A* *p*

end

5.15 Copeland Module

theory *Copeland-Module*
imports *Component-Types/Elimination-Module*
begin

This is the Copeland module used by the Copeland voting rule. The Copeland rule elects the alternatives with the highest difference between the amount of simple-majority wins and the amount of simple-majority losses. The module implemented herein only rejects the alternatives not elected by the voting rule, and defers the alternatives that would be elected by the full voting rule.

5.15.1 Definition

fun *copeland-score* :: ('a, 'v) *Evaluation-Function* **where**
copeland-score $V\ x\ A\ p =$
 $\text{card } \{y \in A . \text{wins } V\ x\ p\ y\} - \text{card } \{y \in A . \text{wins } V\ y\ p\ x\}$

Chapter 6

Compositional Structures

6.1 Drop- and Pass-Compatibility

```
theory Drop-And-Pass-Compatibility
imports Basic-Modules/Drop-Module
        Basic-Modules/Pass-Module
begin
```

This is a collection of properties about the interplay and compatibility of both the drop module and the pass module.

```
theorem drop-zero-mod-rej-zero[simp]:
  fixes  $r :: 'a \text{ Preference-Relation}$ 
  assumes linear-order  $r$ 
  shows rejects 0 (drop-module 0  $r$ )
  <proof>
```

The drop module rejects n alternatives (if there are at least n alternatives).

```
theorem drop-two-mod-rej-n[simp]:
  fixes  $r :: 'a \text{ Preference-Relation}$ 
  assumes linear-order  $r$ 
  shows rejects  $n$  (drop-module  $n$   $r$ )
  <proof>
```

The pass and drop module are (disjoint-)compatible.

```
theorem drop-pass-disj-compat[simp]:
  fixes
     $r :: 'a \text{ Preference-Relation}$  and
     $n :: \text{nat}$ 
  assumes linear-order  $r$ 
  shows disjoint-compatibility (drop-module  $n$   $r$ ) (pass-module  $n$   $r$ )
  <proof>
```

```
end
```

6.2 Revision Composition

```
theory Revision-Composition
  imports Basic-Modules/Component-Types/Electoral-Module
begin
```

A revised electoral module rejects all originally rejected or deferred alternatives, and defers the originally elected alternatives. It does not elect any alternatives.

6.2.1 Definition

```
fun revision-composition :: ('a, 'v, 'a Result) Electoral-Module  $\Rightarrow$ 
  ('a, 'v, 'a Result) Electoral-Module where
  revision-composition m V A p = ({}, A - elect m V A p, elect m V A p)
```

```
abbreviation rev :: ('a, 'v, 'a Result) Electoral-Module  $\Rightarrow$ 
  ('a, 'v, 'a Result) Electoral-Module (- $\downarrow$  50) where
   $m\downarrow \equiv \text{revision-composition } m$ 
```

6.2.2 Soundness

```
theorem rev-comp-sound[simp]:
  fixes m :: ('a, 'v, 'a Result) Electoral-Module
  assumes SCF-result.electoral-module m
  shows SCF-result.electoral-module (revision-composition m)
   $\langle \text{proof} \rangle$ 
```

```
lemma voters-determine-rev-comp:
  fixes m :: ('a, 'v, 'a Result) Electoral-Module
  assumes voters-determine-election m
  shows voters-determine-election (revision-composition m)
   $\langle \text{proof} \rangle$ 
```

6.2.3 Composition Rules

An electoral module received by revision is never electing.

```
theorem rev-comp-non-electing[simp]:
  fixes m :: ('a, 'v, 'a Result) Electoral-Module
  assumes SCF-result.electoral-module m
  shows non-electing ( $m\downarrow$ )
   $\langle \text{proof} \rangle$ 
```

Revising an electing electoral module results in a non-blocking electoral module.

```

theorem rev-comp-non-blocking[simp]:
  fixes  $m :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$ 
  assumes electing m
  shows non-blocking (m↓)
  ⟨proof⟩

```

Revising an invariant monotone electoral module results in a defer-invariant-monotone electoral module.

```

theorem rev-comp-def-inv-mono[simp]:
  fixes  $m :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$ 
  assumes invariant-monotonicity m
  shows defer-invariant-monotonicity (m↓)
  ⟨proof⟩

```

end

6.3 Sequential Composition

```

theory Sequential-Composition
  imports Basic-Modules/Component-Types/Electoral-Module
begin

```

The sequential composition creates a new electoral module from two electoral modules. In a sequential composition, the second electoral module makes decisions over alternatives deferred by the first electoral module.

6.3.1 Definition

```

fun sequential-composition ::  $('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$ 
   $(('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$ 
   $(('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \text{ where}$ 
    sequential-composition m n V A p =
      (let new-A = defer m V A p;
        new-p = limit-profile new-A p in (
          (elect m V A p)  $\cup$  (elect n V new-A new-p),
          (reject m V A p)  $\cup$  (reject n V new-A new-p),
          defer n V new-A new-p))
  abbreviation sequence ::  $('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$ 
     $(('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$ 
    (infix  $\triangleright$  50) where
       $m \triangleright n \equiv \text{sequential-composition } m \text{ } n$ 

```

```

fun sequential-composition' ::  $('a, 'v, 'a \text{ Result}) \text{ Electoral-Module} \Rightarrow$ 

```

$(\text{'a}, \text{'v}, \text{'a Result}) \text{ Electoral-Module} \Rightarrow$
 $(\text{'a}, \text{'v}, \text{'a Result}) \text{ Electoral-Module} \text{ where}$
 $\text{sequential-composition}' m n V A p =$

6.3.4 Composition Rules

The sequential composition preserves the non-blocking property.

theorem *seq-comp-presv-non-blocking[simp]*:
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
 $\text{non-blocking-}m$: $\text{non-blocking } m$ **and**
 $\text{non-blocking-}n$: $\text{non-blocking } n$
shows $\text{non-blocking } (m \triangleright n)$
 $\langle \text{proof} \rangle$

Sequential composition preserves the non-electing property.

theorem *seq-comp-presv-non-electing[simp]*:
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
 $\text{non-electing } m$ **and**
 $\text{non-electing } n$
shows $\text{non-electing } (m \triangleright n)$
 $\langle \text{proof} \rangle$

Composing an electoral module that defers exactly 1 alternative in sequence after an electoral module that is electing results (still) in an electing electoral module.

theorem *seq-comp-electing[simp]*:
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
 $\text{def-one-}m$: $\text{defers } 1 \ m$ **and**
 $\text{electing-}n$: $\text{electing } n$
shows $\text{electing } (m \triangleright n)$
 $\langle \text{proof} \rangle$

lemma *def-lift-inv-seq-comp-help*:
fixes
 $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$ **and**
 $A :: 'a \text{ set}$ **and**
 $V :: 'v \text{ set}$ **and**

$p \ q :: ('a, 'v) \text{ Profile}$ **and**
 $a :: 'a$
assumes
monotone-m: defer-lift-invariance m and
monotone-n: defer-lift-invariance n and
voters-determine-n: voters-determine-election n and
def-and-lifted: $a \in (\text{defer } (m \triangleright n) \ V \ A \ p) \wedge \text{lifted } V \ A \ p \ q \ a$
shows $(m \triangleright n) \ V \ A \ p = (m \triangleright n) \ V \ A \ q$
 <proof>

Sequential composition preserves the property defer-lift-invariance.

theorem *seq-comp-presv-def-lift-inv[simp]:*
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
defer-lift-invariance m and
defer-lift-invariance n and
voters-determine-election n
shows *defer-lift-invariance $(m \triangleright n)$*
 <proof>

Composing a non-blocking, non-electing electoral module in sequence with an electoral module that defers exactly one alternative results in an electoral module that defers exactly one alternative.

theorem *seq-comp-def-one[simp]:*
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
non-blocking-m: non-blocking m and
non-electing-m: non-electing m and
def-one-n: defers 1 n
shows *defers 1 $(m \triangleright n)$*
 <proof>

Composing a defer-lift invariant and a non-electing electoral module that defers exactly one alternative in sequence with an electing electoral module results in a monotone electoral module.

theorem *disj-compat-seq[simp]:*
fixes $m \ m' \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
compatible: disjoint-compatibility m n and
module-m': SCF-result.electoral-module m' and
voters-determine-m': voters-determine-election m'
shows *disjoint-compatibility $(m \triangleright m') \ n$*
 <proof>

theorem *seq-comp-cond-compat[simp]:*
fixes $m \ n :: ('a, 'v, 'a \text{ Result}) \text{ Electoral-Module}$
assumes
dcc-m: defer-condorcet-consistency m and

nb-n: non-blocking n and
ne-n: non-electing n
shows *condorcet-compatibility* ($m \triangleright n$)
 <proof>

Composing a defer-condorcet-consistent electoral module in sequence with a non-blocking and non-electing electoral module results in a defer-condorcet-consistent module.

theorem *seq-comp-dcc[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
dcc-m: defer-condorcet-consistency m and
nb-n: non-blocking n and
ne-n: non-electing n
shows *defer-condorcet-consistency* ($m \triangleright n$)
 <proof>

Composing a defer-lift invariant and a non-electing electoral module that defers exactly one alternative in sequence with an electing electoral module results in a monotone electoral module.

theorem *seq-comp-mono[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
def-monotone-m: defer-lift-invariance m and
non-ele-m: non-electing m and
def-one-m: defers 1 m and
electing-n: electing n
shows *monotonicity* ($m \triangleright n$)
 <proof>

Composing a defer-invariant-monotone electoral module in sequence before a non-electing, defer-monotone electoral module that defers exactly 1 alternative results in a defer-lift-invariant electoral module.

theorem *def-inv-mono-imp-def-lift-inv[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
strong-def-mon-m: defer-invariant-monotonicity m and
non-electing-n: non-electing n and
defers-one: defers 1 n and
defer-monotone-n: defer-monotonicity n and
voters-determine-n: voters-determine-election n
shows *defer-lift-invariance* ($m \triangleright n$)
 <proof>

end

6.4 Parallel Composition

```

theory Parallel-Composition
  imports Basic-Modules/Component-Types/Aggregator
           Basic-Modules/Component-Types/Electoral-Module
begin

```

The parallel composition composes a new electoral module from two electoral modules combined with an aggregator. Therein, the two modules each make a decision and the aggregator combines them to a single (aggregated) result.

6.4.1 Definition

```

fun parallel-composition :: ('a, 'v, 'a Result) Electoral-Module  $\Rightarrow$ 
    ('a, 'v, 'a Result) Electoral-Module  $\Rightarrow$  'a Aggregator  $\Rightarrow$ 
    ('a, 'v, 'a Result) Electoral-Module where

6.6 Maximum Parallel Composition

theory *Maximum-Parallel-Composition*

imports *Basic-Modules/Component-Types/Maximum-Aggregator*
Parallel-Composition

begin

This is a family of parallel compositions. It composes a new electoral module from two electoral modules combined with the maximum aggregator. Therein, the two modules each make a decision and then a partition is returned where every alternative receives the maximum result of the two input partitions. This means that, if any alternative is elected by at least one of the modules, then it gets elected, if any non-elected alternative is deferred by at least one of the modules, then it gets deferred, only alternatives rejected by both modules get rejected.

6.6.1 Definition

6.6.4 Composition Rules

Using a conservative aggregator, the parallel composition preserves the property non-electing.

theorem *conserv-max-agg-presv-non-electing[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
 non-electing m **and**
 non-electing n
shows *non-electing* $(m \parallel_{\uparrow} n)$
<proof>

Using the max aggregator, composing two compatible electoral modules in parallel preserves defer-lift-invariance.

theorem *par-comp-def-lift-inv[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
 compatible: disjoint-compatibility $m\ n$ **and**
 monotone-m: defer-lift-invariance m **and**
 monotone-n: defer-lift-invariance n
shows *defer-lift-invariance* $(m \parallel_{\uparrow} n)$
<proof>

lemma *par-comp-rej-card*:
fixes
 $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$ **and**
 $A :: 'a\ set$ **and**
 $V :: 'v\ set$ **and**
 $p :: ('a, 'v)\ Profile$ **and**
 $c :: nat$
assumes
 compatible: disjoint-compatibility $m\ n$ **and**
 prof: profile $V\ A\ p$ **and**
 fin-A: finite A **and**
 reject-sum: card (reject $m\ V\ A\ p) + card (reject\ n\ V\ A\ p) = card\ A + c$
shows *card (reject* $(m \parallel_{\uparrow} n)\ V\ A\ p) = c$
<proof>

Using the max-aggregator for composing two compatible modules in parallel, whereof the first one is non-electing and defers exactly one alternative, and the second one rejects exactly two alternatives, the composition results in an electoral module that eliminates exactly one alternative.

theorem *par-comp-elim-one[simp]*:
fixes $m\ n :: ('a, 'v, 'a\ Result)\ Electoral\ Module$
assumes
 defers-m-one: defers $1\ m$ **and**
 non-elec-m: non-electing m **and**
 rejec-n-two: rejects $2\ n$ **and**

```

    disj-comp: disjoint-compatibility m n
    shows eliminates 1 (m ||↑ n)
  <proof>

end

```

6.7 Elect Composition

```

theory Elect-Composition
  imports Basic-Modules/Elect-Module
           Sequential-Composition
begin

```

The elect composition sequences an electoral module and the elect module. It finalizes the module's decision as it simply elects all their non-rejected alternatives. Thereby, any such elect-composed module induces a proper voting rule in the social choice sense, as all alternatives are either rejected or elected.

6.7.1 Definition

```

fun elector :: ('a, 'v, 'a Result) Electoral-Module ⇒
      ('a, 'v, 'a Result) Electoral-Module where
  elector m = (m ▷ elect-module)

```

Voting Rules

7.1 Plurality Rule

```
theory Plurality-Rule
  imports Compositional-Structures/Basic-Modules/Plurality-Module
           Compositional-Structures/Revision-Composition
           Compositional-Structures/Elect-Composition
begin
```

This is a definition of the plurality voting rule as elimination module as well as directly. In the former one, the max operator of the set of the scores of all alternatives is evaluated and is used as the threshold value.

7.1.1 Definition

```
fun plurality-rule :: ('a, 'v, 'a Result) Electoral-Module where
  plurality-rule V A p = elector plurality V A p

fun plurality-rule' :: ('a, 'v, 'a Result) Electoral-Module where
  plurality-rule' V A p =
    (if finite A
     then ({a ∈ A. ∀ x ∈ A. win-count V p x ≤ win-count V p a},
           {a ∈ A. ∃ x ∈ A. win-count V p x > win-count V p a},
           {}))
     else (A, {}, {}))

lemma plurality-revision-equiv:
  fixes
    A :: 'a set and
    V :: 'v set and
    p :: ('a, 'v) Profile
  shows plurality V A p = (plurality-rule↓) V A p
  ⟨proof⟩

lemma plurality'-revision-equiv:
```

fixes
 $A :: 'a \text{ set}$ **and**
 $V :: 'v \text{ set}$ **and**
 $p :: ('a, 'v) \text{ Profile}$
shows $\text{plurality}' V A p = (\text{plurality-rule}'\downarrow) V A p$
 $\langle \text{proof} \rangle$

lemma *plurality-rule-equiv*:
fixes
 $A :: 'a \text{ set}$ **and**
 $V :: 'v \text{ set}$ **and**
 $p :: ('a, 'v) \text{ Profile}$
shows $\text{plurality-rule } V A p = \text{plurality-rule}' V A p$
 $\langle \text{proof} \rangle$

end

7.2 Borda Rule

theory *Borda-Rule*

imports *Compositional-Structures/Basic-Modules/Borda-Module*

Compositional-Structures/Basic-Modules/Component-Types/Votewise-Distance-Rationalization

Compositional-Structures/Elect-Composition

begin

This is the Borda rule. On each ballot, each alternative is assigned a score that depends on how many alternatives are ranked below. The sum of all such scores for an alternative is hence called their Borda score. The alternative with the highest Borda score is elected.

7.2.1 Definition

fun *borda-rule* :: ('a, 'v, 'a Result) Electoral-Module **where**
 borda-rule V A p = *elector borda* V A p

fun *borda-rule_R* :: ('a, 'v :: wellorder, 'a Result) Electoral-Module **where**
 borda-rule_R V A p = *swap-R unanimity* V A p

7.2.2 Soundness

theorem *borda-rule-sound*: *SCF-result.electoral-module borda-rule*
<proof>

theorem *borda-rule_R-sound*: *SCF-result.electoral-module borda-rule_R*
<proof>

7.2.3 Anonymity

theorem *borda-rule_R-anonymous*: *SCF-result.anonymity borda-rule_R*
<proof>

end

7.3 Pairwise Majority Rule

```
theory Pairwise-Majority-Rule
  imports Compositional-Structures/Basic-Modules/Condorcet-Module
           Compositional-Structures/Defer-One-Loop-Composition
begin
```

This is the pairwise majority rule, a voting rule that implements the Condorcet criterion, i.e., it elects the Condorcet winner if it exists, otherwise a tie remains between all alternatives.

7.3.1 Definition

```
fun pairwise-majority-rule :: ('a, 'v, 'a Result) Electoral-Module where
  pairwise-majority-rule V A p = elector condorcet V A p

fun elim-leq-condorcet :: ('a, 'v, 'a Result) Electoral-Module where
  elim-leq-condorcet V A p = ((min-eliminator condorcet-score)  $\odot_{\exists !d}$ ) V A p

fun pairwise-majority-rule' :: ('a, 'v, 'a Result) Electoral-Module where
  pairwise-majority-rule' V A p = iter-elect elim-leq-condorcet V A p
```

7.3.2 Soundness

```
theorem pairwise-majority-rule-sound: SCF-result.electoral-module pairwise-majority-rule
  <proof>

theorem condorcet'-sound: SCF-result.electoral-module elim-leq-condorcet
  <proof>

theorem pairwise-majority-rule'-sound: SCF-result.electoral-module pairwise-majority-rule'
  <proof>
```

7.3.3 Condorcet Consistency

```
theorem pairwise-majority-rule-condorcet: condorcet-consistency pairwise-majority-rule
  <proof>

end
```

7.4 Copeland Rule

```
theory Copeland-Rule
  imports Compositional-Structures/Basic-Modules/Copeland-Module
           Compositional-Structures/Elect-Composition
begin
```

This is the Copeland voting rule. The idea is to elect the alternatives with the highest difference between the amount of simple-majority wins and the amount of simple-majority losses.

7.4.1 Definition

```
fun copeland-rule :: ('a, 'v, 'a Result) Electoral-Module where
  copeland-rule V A p = elector copeland V A p
```

7.4.2 Soundness

```
theorem copeland-rule-sound: SCF-result.electoral-module copeland-rule
  ⟨proof⟩
```

7.4.3 Condorcet Consistency

```
theorem copeland-condorcet: condorcet-consistency copeland-rule
  ⟨proof⟩
```

end

7.5 Minimax Rule

```
theory Minimax-Rule
  imports Compositional-Structures/Basic-Modules/Minimax-Module
           Compositional-Structures/Elect-Composition
begin
```

This is the Minimax voting rule. It elects the alternatives with the highest Minimax score.

7.5.1 Definition

```
fun minimax-rule :: ('a, 'v, 'a Result) Electoral-Module where
  minimax-rule V A p = elector minimax V A p
```

7.5.2 Soundness

```
theorem minimax-rule-sound: SCF-result.electoral-module minimax-rule
  ⟨proof⟩
```

7.5.3 Condorcet Consistency

```
theorem minimax-condorcet: condorcet-consistency minimax-rule
  ⟨proof⟩
```

end

7.6 Black's Rule

```
theory Blacks-Rule
  imports Pairwise-Majority-Rule
           Borda-Rule
begin
```

This is Black's voting rule. It is composed of a function that determines the Condorcet winner, i.e., the Pairwise Majority rule, and the Borda rule. Whenever there exists no Condorcet winner, it elects the choice made by the Borda rule, otherwise the Condorcet winner is elected.

7.6.1 Definition

```
fun black :: ('a, 'v, 'a Result) Electoral-Module where
  black A p = (condorcet  $\triangleright$  borda) A p

fun blacks-rule :: ('a, 'v, 'a Result) Electoral-Module where
  blacks-rule A p = elector black A p
```

7.6.2 Soundness

```
theorem blacks-sound: SCF-result.electoral-module black
   $\langle$ proof $\rangle$ 
```

```
theorem blacks-rule-sound: SCF-result.electoral-module blacks-rule
   $\langle$ proof $\rangle$ 
```

7.6.3 Condorcet Consistency

```
theorem black-is-dcc: defer-condorcet-consistency black
   $\langle$ proof $\rangle$ 
```

```
theorem black-condorcet: condorcet-consistency blacks-rule
   $\langle$ proof $\rangle$ 
```

end

7.7 Nanson-Baldwin Rule

```
theory Nanson-Baldwin-Rule
  imports Compositional-Structures/Basic-Modules/Borda-Module
           Compositional-Structures/Defer-One-Loop-Composition
begin
```

This is the Nanson-Baldwin voting rule. It excludes alternatives with the lowest Borda score from the set of possible winners and then adjusts the Borda score to the new (remaining) set of still eligible alternatives.

7.7.1 Definition

```
fun nanson-baldwin-rule :: ('a, 'v, 'a Result) Electoral-Module where
  nanson-baldwin-rule A p =
    ((min-eliminator borda-score)  $\circ_{\exists 1d}$ ) A p
```

7.7.2 Soundness

```
theorem nanson-baldwin-rule-sound: SCF-result.electoral-module nanson-baldwin-rule
  <proof>

end
```

7.8 Classic Nanson Rule

```
theory Classic-Nanson-Rule
  imports Compositional-Structures/Basic-Modules/Borda-Module
           Compositional-Structures/Defer-One-Loop-Composition
begin
```

This is the classic Nanson's voting rule, i.e., the rule that was originally invented by Nanson, but not the Nanson-Baldwin rule. The idea is similar, however, as alternatives with a Borda score less or equal than the average Borda score are excluded. The Borda scores of the remaining alternatives are hence adjusted to the new set of (still) eligible alternatives.

7.8.1 Definition

```
fun classic-nanson-rule :: ('a, 'v, 'a Result) Electoral-Module where
  classic-nanson-rule V A p =
    ((leq-average-eliminator borda-score)  $\circ_{\exists 1d}$ ) V A p
```

7.8.2 Soundness

theorem *classic-nanson-rule-sound: SCF-result.electoral-module classic-nanson-rule*
 <proof>
end

7.9 Schwartz Rule

theory *Schwartz-Rule*
 imports *Compositional-Structures/Basic-Modules/Borda-Module*
 Compositional-Structures/Defer-One-Loop-Composition
begin

This is the Schwartz voting rule. Confusingly, it is sometimes also referred as Nanson's rule. The Schwartz rule proceeds as in the classic Nanson's rule, but excludes alternatives with a Borda score that is strictly less than the average Borda score.

7.9.1 Definition

fun *schwartz-rule* :: ('a, 'v, 'a Result) Electoral-Module **where**
 schwartz-rule V A p =
 ((*less-average-eliminator* borda-score) $\circ_{\exists!d}$) V A p

7.9.2 Soundness

theorem *schwartz-rule-sound: SCF-result.electoral-module schwartz-rule*
 <proof>
end

7.10 Sequential Majority Comparison

theory *Sequential-Majority-Comparison*
 imports *Plurality-Rule*
 Compositional-Structures/Drop-And-Pass-Compatibility
 Compositional-Structures/Revision-Composition
 Compositional-Structures/Maximum-Parallel-Composition
 Compositional-Structures/Defer-One-Loop-Composition
begin

Sequential majority comparison compares two alternatives by plurality voting. The loser gets rejected, and the winner is compared to the next alternative. This process is repeated until only a single alternative is left, which is then elected.

7.10.1 Definition

fun *sequential-majority-comparison* :: 'a Preference-Relation $\Rightarrow$
 ('a, 'v, 'a Result) Electoral-Module **where**
 sequential-majority-comparison $x \ V \ A \ p =$
 ((elector (((pass-module 2 x) $\triangleright$ ((plurality-rule $\downarrow$) $\triangleright$ (pass-module 1 x))) $\parallel_{\uparrow}$
 (drop-module 2 x)) $\odot_{\exists ! d}$) $V \ A \ p$)

7.10.2 Soundness

As all basic modules are electoral modules (, aggregators, termination conditions, ...), and all used compositional structures create electoral modules, sequential majority comparison is also an electoral module.

theorem *sequential-majority-comparison-sound*:
 fixes $x :: 'a \text{ Preference-Relation}$
 shows *SCF-result.electoral-module* (*sequential-majority-comparison* x)
 <proof>

7.10.3 Electing

The sequential majority comparison electoral module is electing. This property is needed to convert electoral modules to a social-choice function. Apart from the very last proof step, it is a part of the monotonicity proof below.

theorem *sequential-majority-comparison-electing*:
 fixes $x :: 'a \text{ Preference-Relation}$
 assumes *linear-order* x
 shows *electing* (*sequential-majority-comparison* x)
 <proof>

7.10.4 (Weak) Monotonicity

The following proof is a fully-modular proof for weak monotonicity of sequential majority comparison. It is composed of many small steps.

theorem *sequential-majority-comparison-monotone*:
 fixes $x :: 'a \text{ Preference-Relation}$
 assumes *linear-order* x
 shows *monotonicity* (*sequential-majority-comparison* x)
 <proof>

end

7.11 Kemeny Rule

theory *Kemeny-Rule*

imports

Compositional-Structures/Basic-Modules/Component-Types/Votewise-Distance-Rationalization
Compositional-Structures/Basic-Modules/Component-Types/Distance-Rationalization-Symmetry

begin

This is the Kemeny rule. It creates a complete ordering of alternatives and evaluates each ordering of the alternatives in terms of the sum of preference reversals on each ballot that would have to be performed in order to produce that transitive ordering. The complete ordering which requires the fewest preference reversals is the final result of the method.

7.11.1 Definition

fun *kemeny-rule* :: ('a, 'v :: wellorder, 'a Result) Electoral-Module **where**
kemeny-rule V A p = *swap- $\mathcal{R}$ strong-unanimity* V A p

7.11.2 Soundness

theorem *kemeny-rule-sound*: *SCF-result.electoral-module kemeny-rule*
<proof>

7.11.3 Anonymity

theorem *kemeny-rule-anonymous*: *SCF-result.anonymity kemeny-rule*
<proof>

7.11.4 Neutrality

lemma *swap-dist-neutral*: *distance-neutrality well-formed-elections*
(votewise-distance swap l-one)
<proof>

theorem *kemeny-rule-neutral*: *SCF-properties.neutrality kemeny-rule*
<proof>

end
